Technology to further optimize IBM servers for cloud computing, analytics and other new workloads

**Press release** Related XML feeds Contact info

IBM (NYSE: IBM) today announced it has entered into a definitive agreement to acquire BLADE Network Technologies (BLADE), a privately held company based in San Jose, CA. BLADE specializes in software and devices that route data and transactions to and from servers. The acquisition is anticipated to close in the fourth quarter of 2010, subject to standard closing conditions and applicable regulatory reviews. Financial terms were not disclosed.

**IBM** **BLADE**

BLADE provides some of the top-tier companies around the world with mission-critical and mission-critical computing workloads. Customers include more than half of the companies on the Fortune 500, across 20 industry verticals. TECHNICAL OVERVIEW: IBM and BLADE have worked together since 2002, resulting in thousands of joint clients. In fact, over 30 percent of IBM System x Blade Centers currently attach to or use BLADE products (1).

The BLADE acquisition builds on the industry-leading capabilities and technologies IBM is applying to its systems, which are optimized to help clients manage a range of new, more demanding workloads. This year, IBM introduced a full line-up of new, workload-optimized systems that incorporate innovation at each level – from microprocessors and firmware software to middleware and hardware. With BLADE, IBM can drive innovation at the systems networking level to enable clients to speed the delivery of key information from system to system – for workloads such as analytics and cloud computing – while also reducing data center costs.

**News release**

HP Completes Acquisition of 3Com Corporation, Accelerates Converged Infrastructure Strategy

PALO ALTO, Calif., April 22, 2010

HP today completed its acquisition of 3Com Corporation, accelerating its converged infrastructure strategy. The transaction closed at a price of \$7.90 per share, marking an end to 3Com's value of approximately \$1.5 billion.

HP will now own 100 percent of 3Com, which will be rebranded as HP ProCurve. The company's enterprise products will be consolidated under HP's Core Networking business unit, which is built on the strength of 3Com's switching, routing and security services. With this integration, customers will be able to simplify their networks, deploy an edge-to-core network fabric for the enterprise and improve IT service delivery capabilities.

The acquisition of 3Com expands HP's Ethernet switching offerings, adds routing solutions and significantly strengthens the company's position in China. 3Com's security and switching capabilities through its TippingPoint portfolio, together with HP's server and networking technologies, enable HP to deliver one of the broadest network technology capabilities in the market to meet customers' needs well into the future.

further details > product integration will be announced at a later date.

HP creates new possibilities for technology to have a meaningful impact on people, businesses, governments and society. The world's largest technology company, HP brings together a portfolio that spans printing, personal computing, software, services and IT infrastructure to solve customer problems. More information about HP (NYSE: HPQ) is available at <http://www.hp.com/>.

This news release contains forward-looking statements that involve risks, uncertainties and assumptions. If such risks or uncertainties materialize or such assumptions prove incorrect, the results of HP and its consolidated subsidiaries could differ materially from those expressed or implied by such forward-looking statements and assumptions. All statements, other than statements of historical fact, are statements that could be deemed forward-

Force10 Networks

**Dell announces its intent to acquire Force10 Networks** More Information

**Acquisition Overview**

Dell intends to acquire Force10 Networks, a technology leader in high-performance data center networking. Force10's solutions maximize enterprise performance and residency, while reducing overall cost of ownership by simplifying network design and supporting open standards-based fabrics and application solutions. The transaction is part of Dell's latest investment as it broadens its enterprise portfolio to offer customers a complete range of data center products and solutions.

**Why Dell?** Dell is committed to expanding its portfolio and be able to offer customers a complete end-to-end infrastructure solution across storage, servers and networking. On top of that, Dell is well-positioned to bring its capable and affordable solutions together with our Alien partners: current network technology and solution partners will remain an important component of our global enterprise data center strategy.

**Have Dell contact you by email or phone**

**Quotes:**

"Today's data centers are too complex, require too much manual intervention, and work in the past is no longer valid in the virtual era. Dell's approach of creating a single, capable and affordable solutions aligns with Force10 Networks' approach to offering a broad range of high flexibility, performance, scale and automation which is fundamental to changing the economics of datacenter networking." Brad Anderson, Senior Vice President.

**Cisco Finally Releases UCS Market Share Numbers** MAY 24 97 Comments 70 tweets TOP ★ SK retweet

May 24, 2011 - IDC came out with their 1Q 2011 worldwide server market revenue report today showing that Cisco has finally entered the market standings with a **3rd place** standing at **9.4%** **factory revenue share**. IDC's findings also showed that both HP and IBM decreased their blade server market share from Q4 2010.

According to IDC, worldwide server sales (x86 servers, not just blade servers) for 1Q 2011 increased 12.1% year over year to \$11.9 billion in factory revenue. IDC also reported the blade server market accelerated and continued its strong growth in 1Q with revenue increasing 23.8% year over year with shipments increasing to 5.4% compared to 1Q 2010. Overall, blade servers represent 15.2% of the quarterly worldwide server revenues. Interestingly enough, 90% of all blade revenue is driven by x86 systems, a segment in which Cisco now represents 20.2% of the market.

Here's a summary of the 4 blade server market share in Q1 2011:

- #1 market share: Cisco at 9.4% in Q1 2011
- #2 market share: HP at 20.2% in Q1 2011
- #3 market share: Dell at 8.2% in Q1 2011
- #4 market share: IBM at 5.0% in Q1 2011

**IDC 1Q 2011 Worldwide Blade Server Market Share**

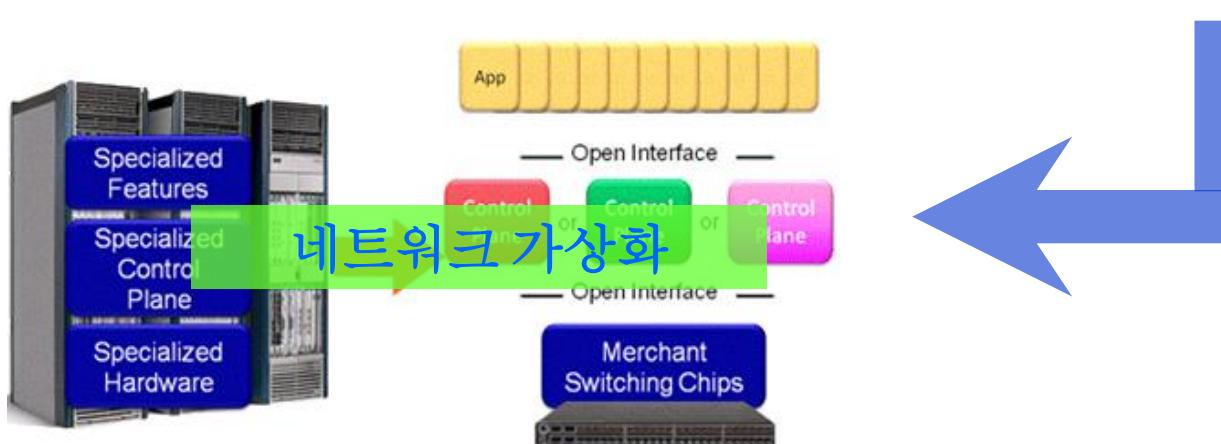

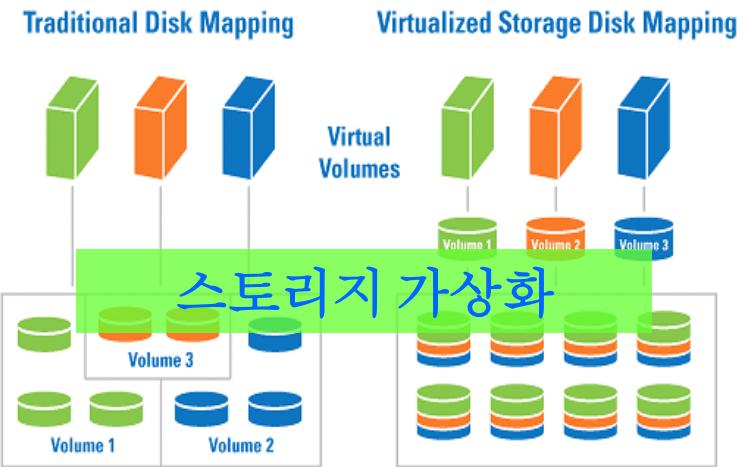

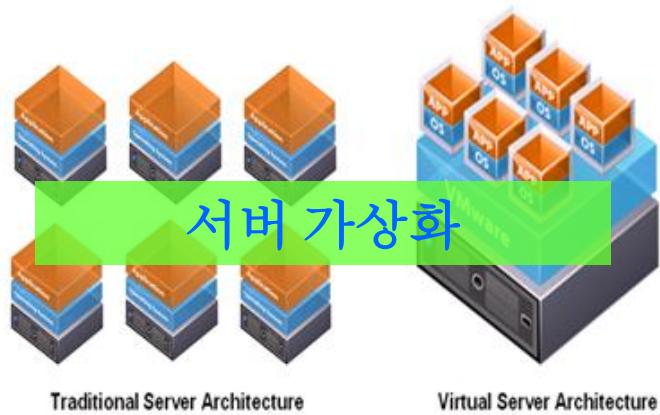

Vendor	Market Share (%)
HP	20.20%
IBM	8.10%
Cisco	9.40%
Dell	8.20%
All Other Vendors	50.00%

# IT Market Trend

## 1. IT Market Trend > 가상화 영역 확대

➤ 서버, 스토리지 가상화 뿐만 아니라 Network 가상화로 Technical Trend 변화

- ✓ 기존 네트워크 구성의 복잡성 탈피와 인프라 투자 및 관리 비용 절감

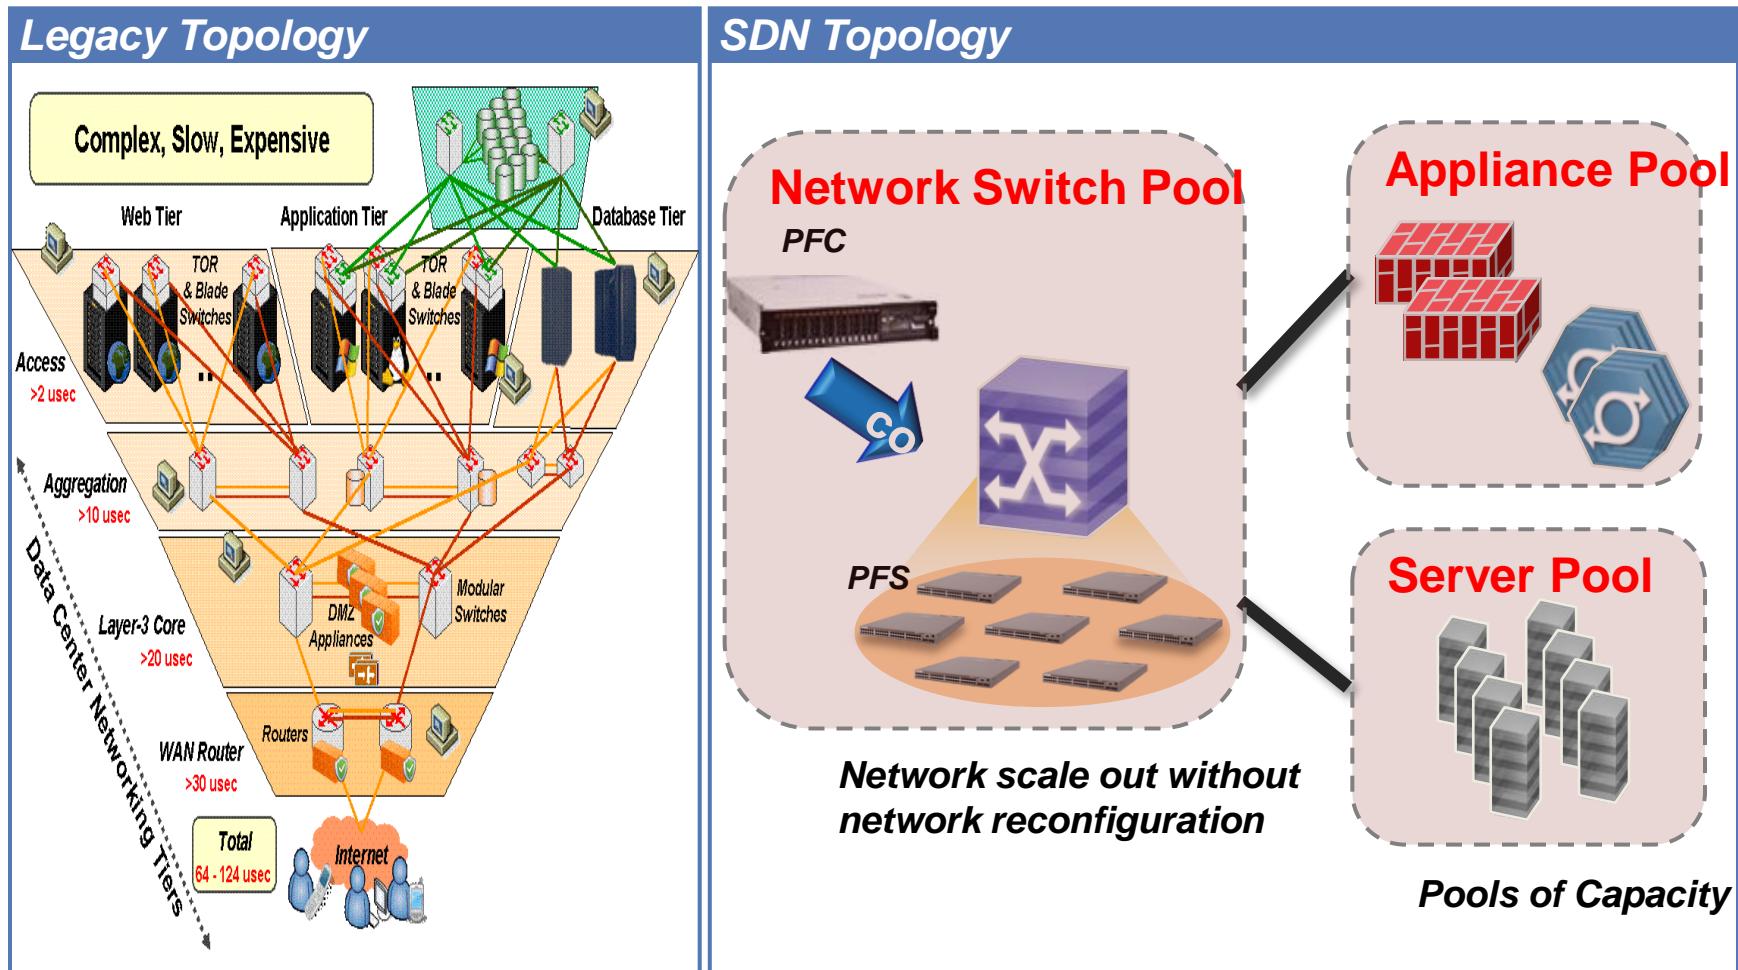

# IT Market Trend

## 1. IT Market Trend > 가상화 영역 확대

### ➤ 서버, 스토리지 가상화 뿐만 아니라 Network 가상화로 Technical Trend 변화

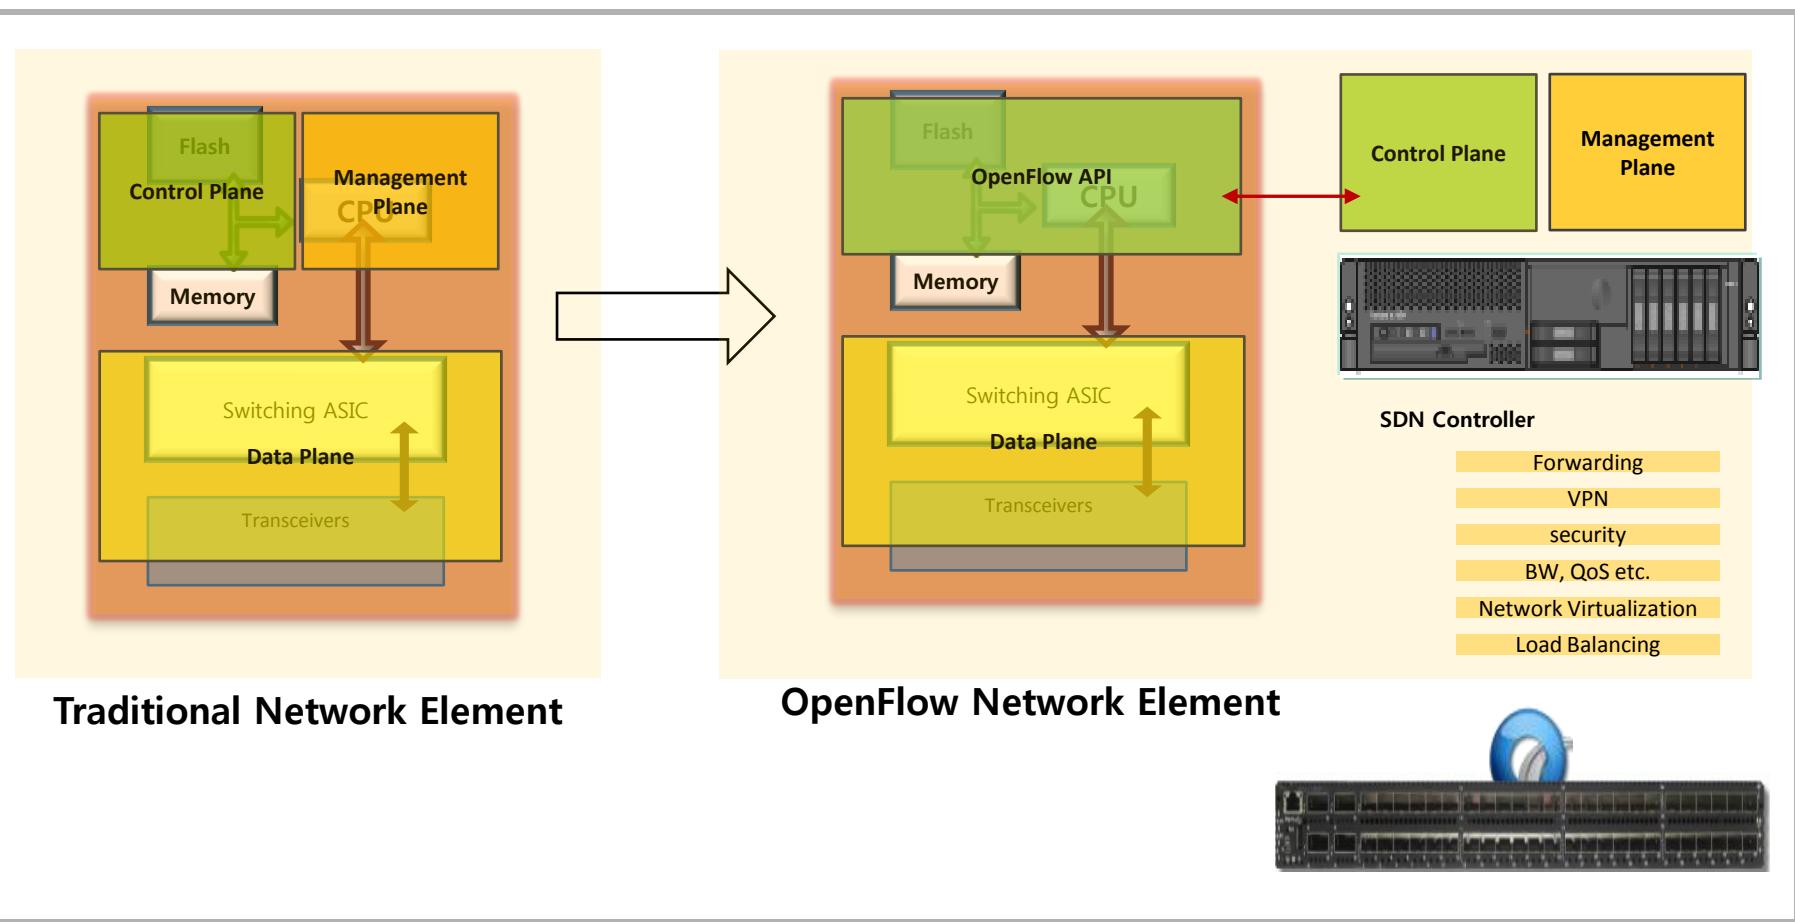

- SDN을 통해 네트워크 영역 또한 하나의 Device Pool로 만들어 간편함 및 확장성의 원활함 제공 네트워크 구성개선을 통한 TCO 절감 및 운영효율제공
- 네트워크 영역의 복잡성과 Vendor의 구속에서 벗어나기 위한 사용자들의 욕구

# IT Market Trend

## 1. IT Market Trend > SDN의 기본 설명

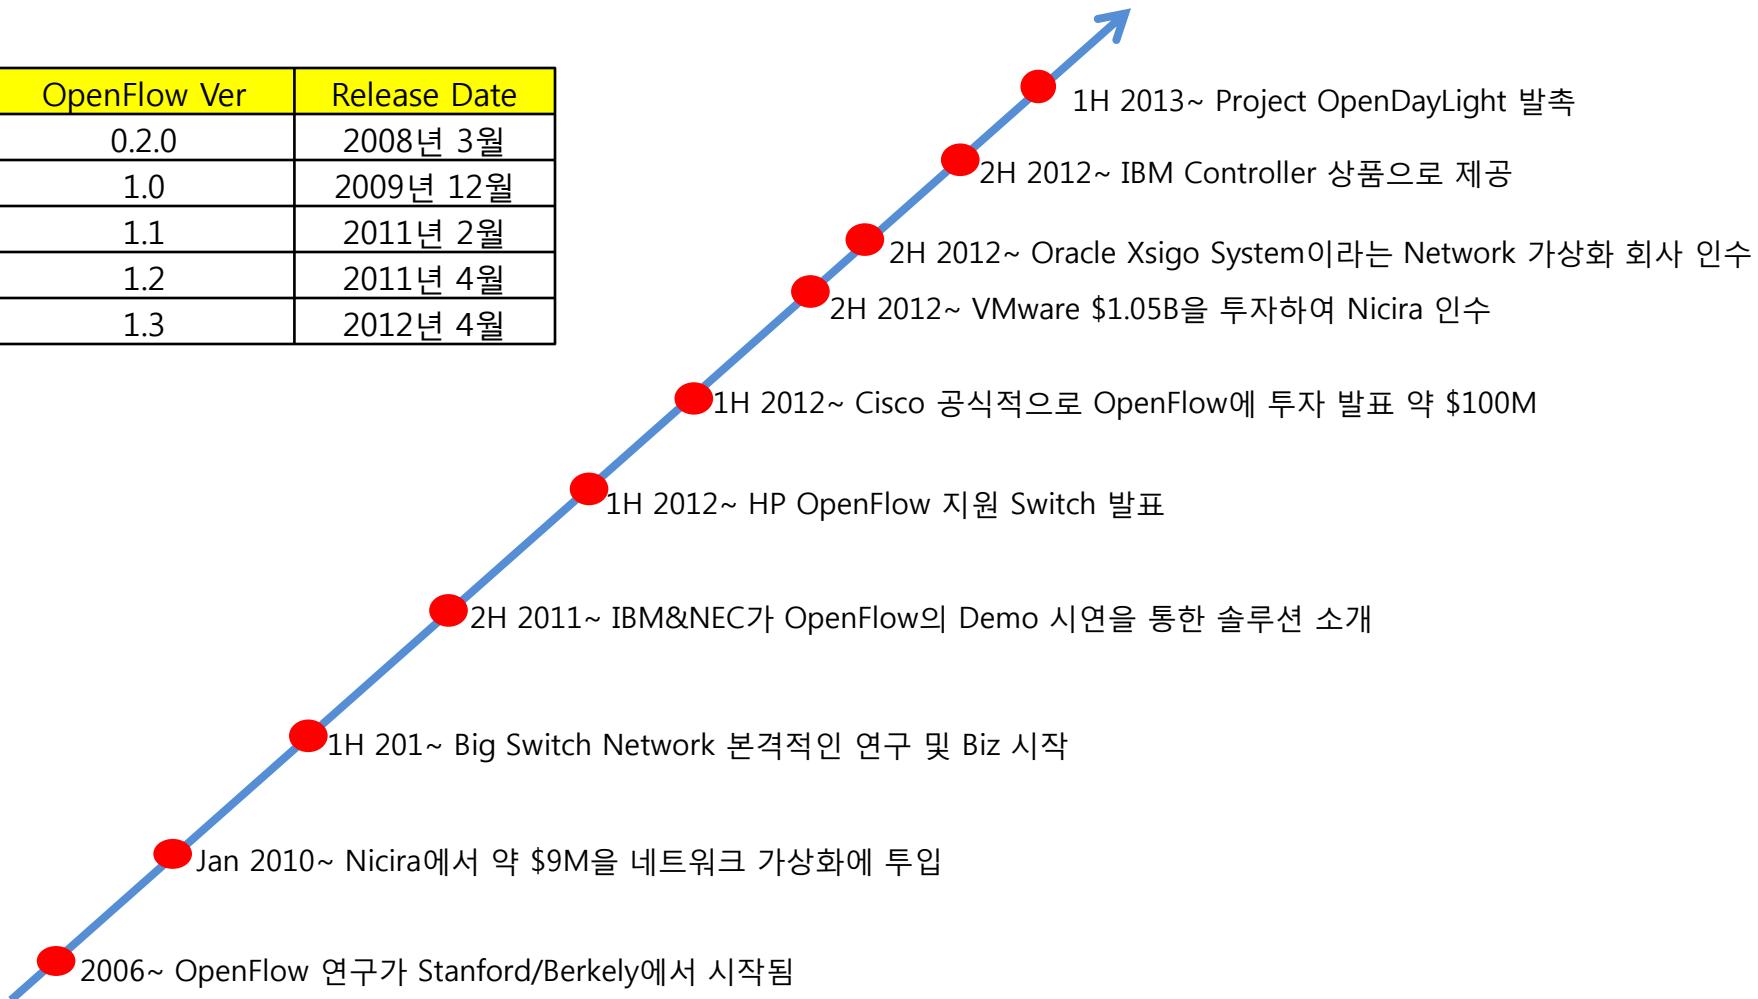

- Control Plane과 Data Plane이 완전히 물리적으로 분리된 형태의 Architecture
- SDN은 네트워크 전체 영역에 초점을 두고 있음
- 현재 SDN은 Datacenter에 초점을 두고 있으며 Google, NTT 등의 대규모 데이터센터에서 도입하고 있음

## 2. SDN> SDN OpenFlow의 역사

- SDN OpenFlow는 시작은 학술적인 목적으로 시작 하였음
- 소규모 가상 네트워크 벤더에서부터 대형 IT Vendor까지 새로운 개념의 Architecture로 인지
- 고객이 leading하는 ONF와 Vendor가 leading하는 OpenDayLight 조직

OpenFlow Ver	Release Date
0.2.0	2008년 3월
1.0	2009년 12월
1.1	2011년 2월
1.2	2011년 4월
1.3	2012년 4월

## 2. SDN> ONF (Open Networking Foundation)

- Main Border Member가 고객 으로 부터 시작
- 각 Vendor들은 고객의 요건에 따라가는 그림
- 기존 Network Vendor들과 None Network Vendor들의 접근법의 차이

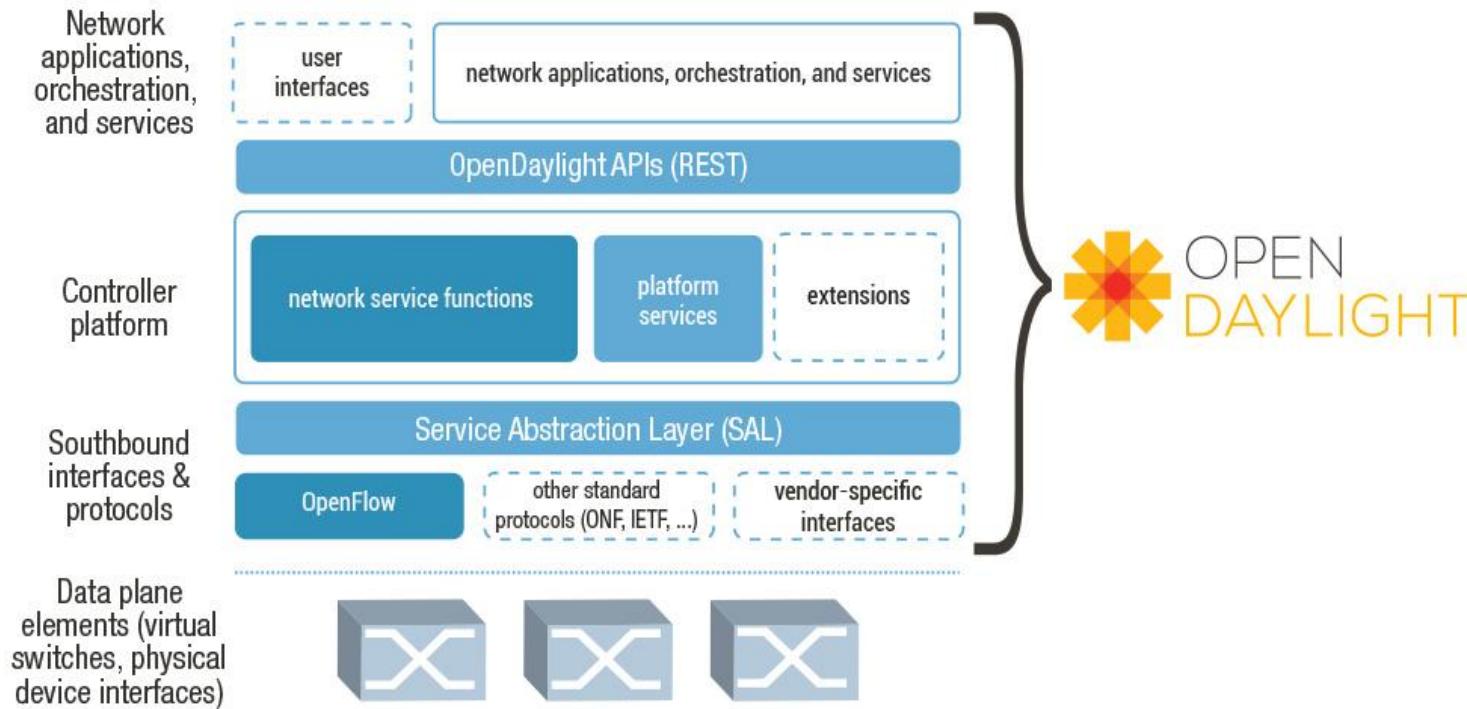

ONF board members are the largest network operators (not networking vendors)

# IBM SDN Solution

## 3. IBM SDN Solution > SDN VE (Virtual Environment)

*A hypervisor for the network*

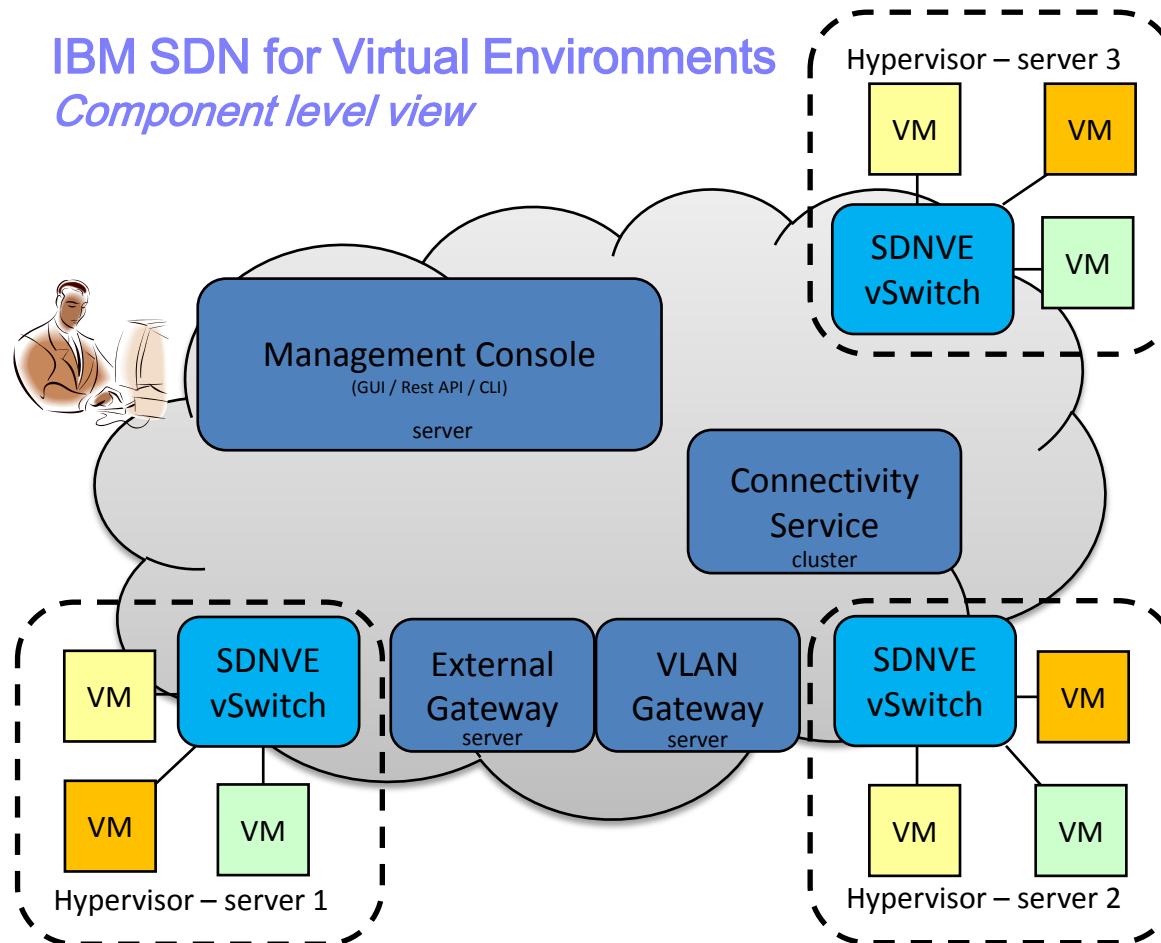

- 사용중인 Network Infra의 변경 또는 추가 작업이 필요 없음
- Server Base의 가상 Workload를 제공
- VM의 mobility가 Layer 2뿐만 아니라 Layer 3에서도 제공 가능

### 3. IBM SDN Solution > SDN VE (Virtual Environment)

#### IBM SDN for Virtual Environments

*Component level view*

#### Management Console

- Provisions and configures virtual networks, Port group profile, Virtual Network (VNID) and subnets within those networks
- Assigns VMs to networks and defines policies between the VNIDs.

#### SDNVE vSwitch

- Enhanced hypervisor switch providing connectivity to VMs ([replaces standard vSwitch](#))
- Provides connectivity to multiple network instances

#### Connectivity Service

- Registration, address lookup and policy lookup
- Multiple nodes for redundancy and load balancing

#### VLAN Gateway

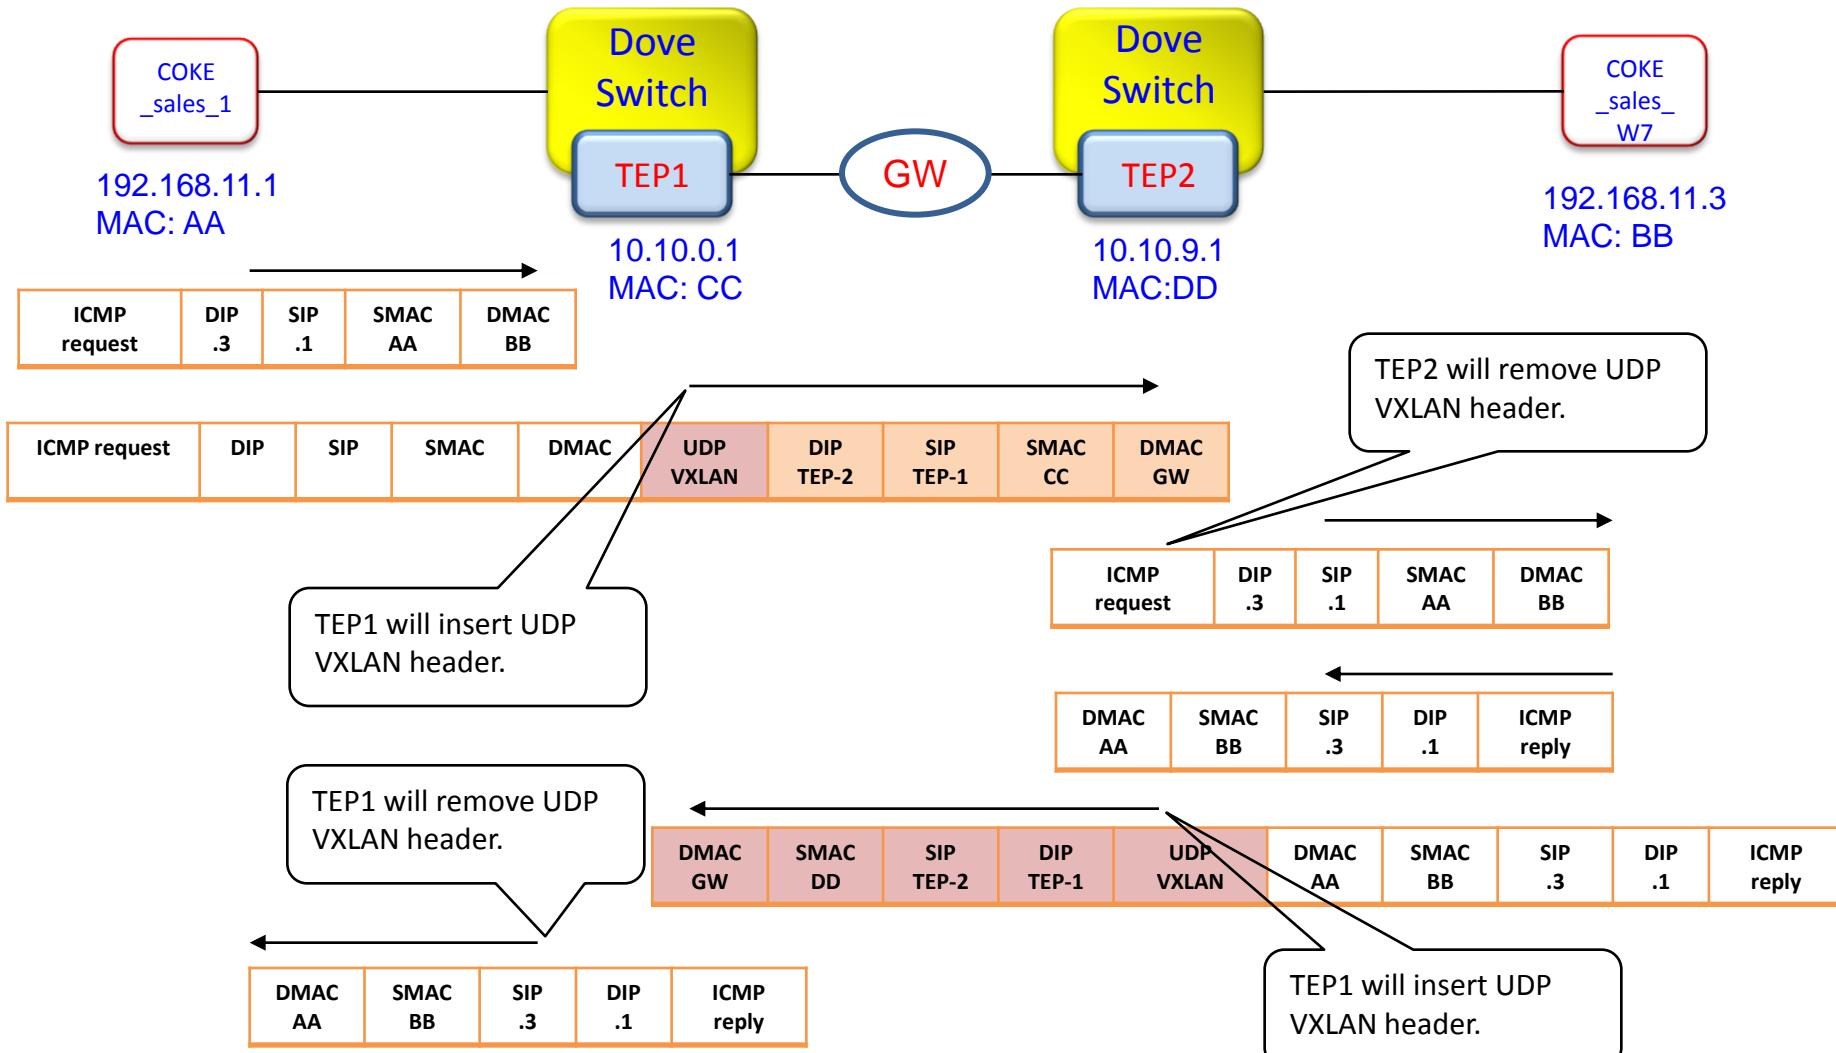

- Connects legacy machines to an SDNVE network, for example VMs in a 5000V deployment

#### External Gateway

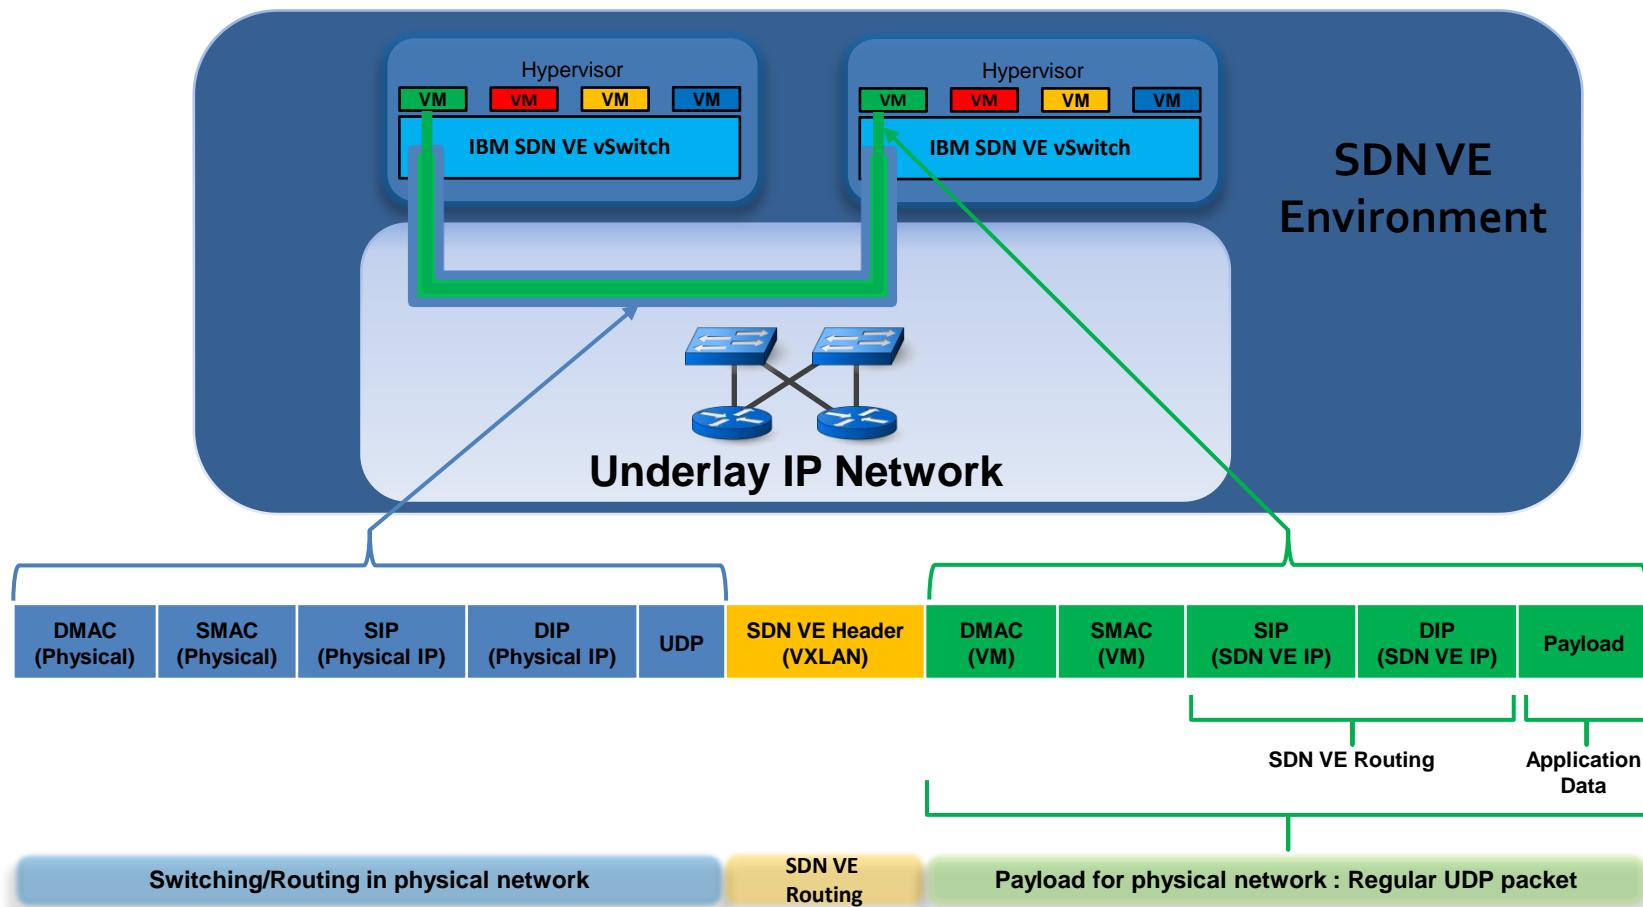

- Connects the virtual network to non-SDNVE networks
- Connects two SDNVE network domains

# Virtual Networking: IBM SDN VE Traffic

- SDN VE Packet Flow Diagram

# IBM SDN VE Traffic is Encapsulated within Existing IP Network

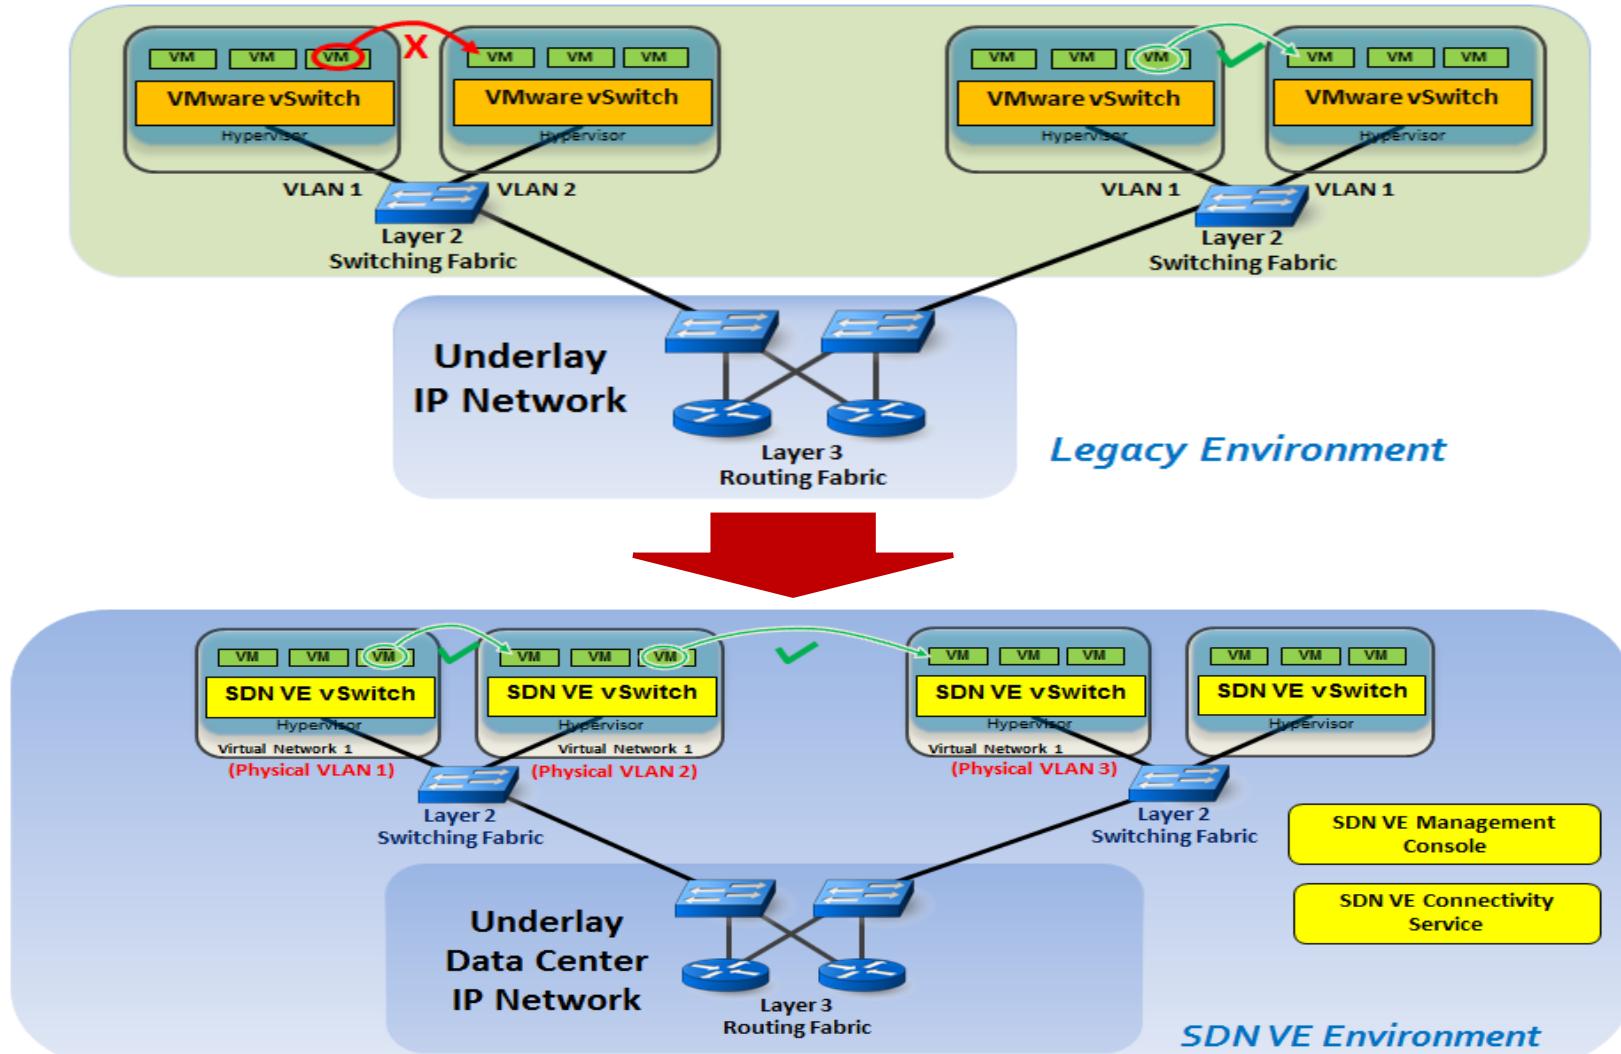

All VMs and vSwitches within an SDN VE environment are associated with an overlay IP topology

- SDN VE virtual network IP packets are encapsulated within IP packets of the existing underlay IP network
- IP packet encapsulation is added/removed as traffic passes through an SDN VE vSwitch at each end
- The SDN VE Header is used to transport IP packets across assigned Virtual Networks within Virtual Domains

# IBM SDN Solution

## 3. IBM SDN Solution > SDN VE (Virtual Environment)

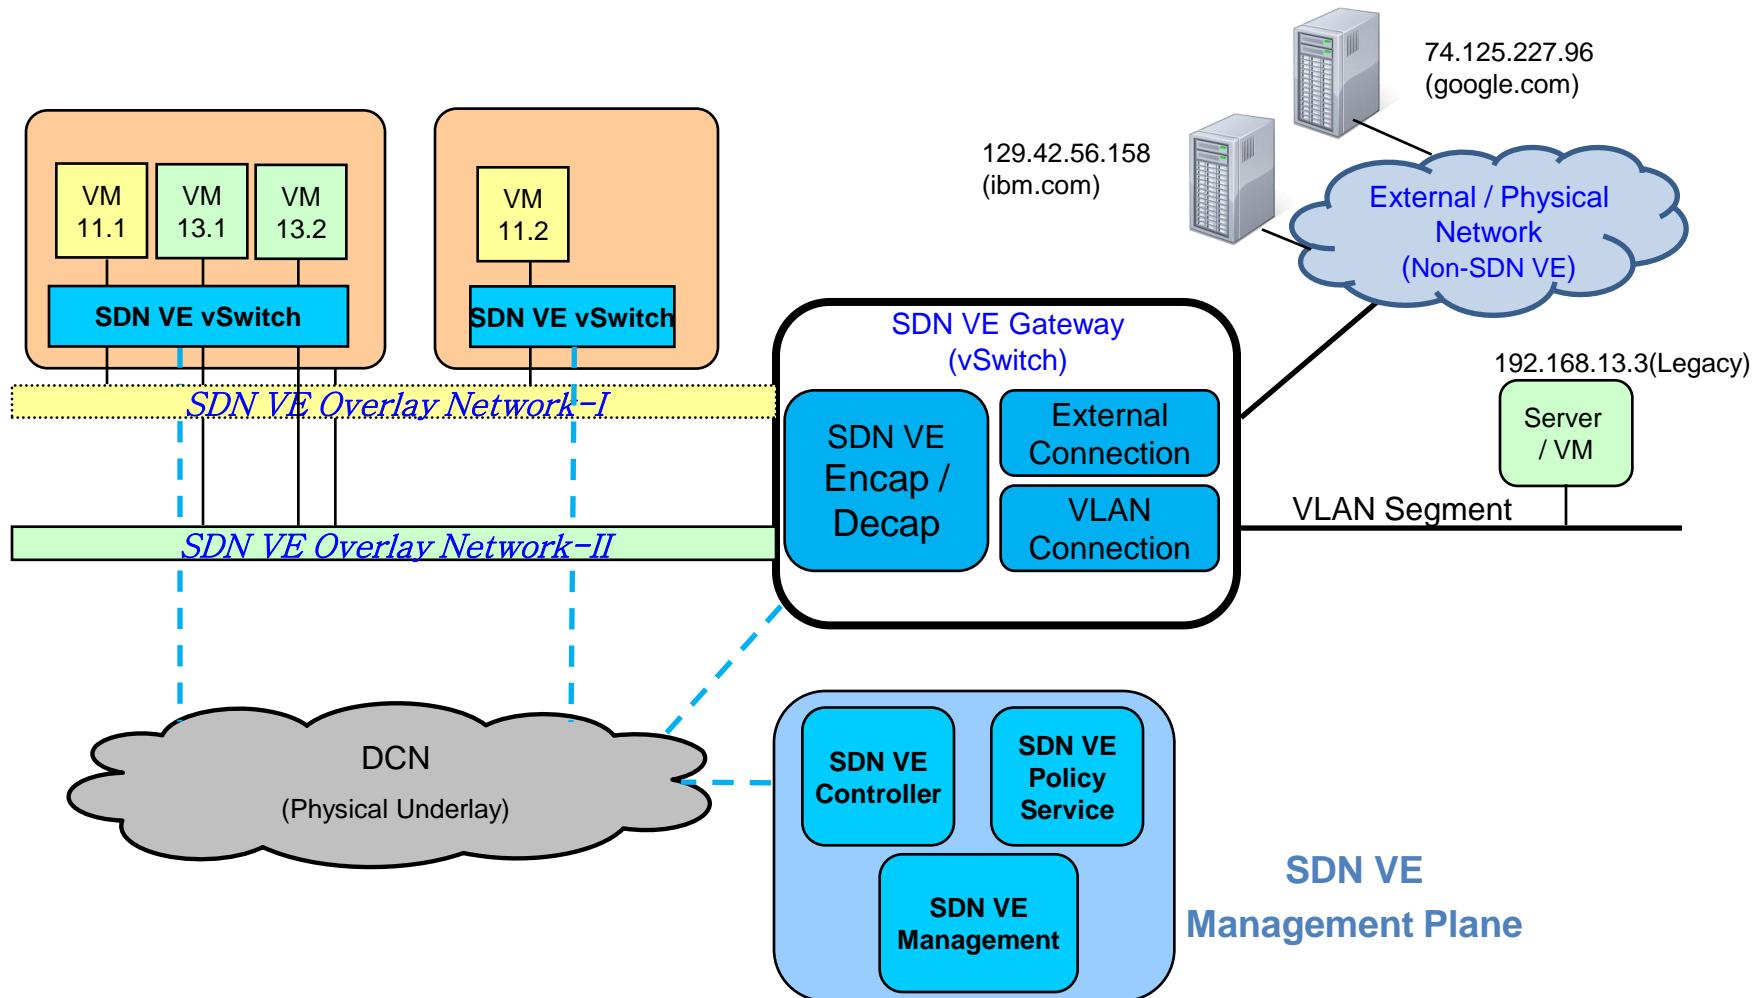

- Layer 3 상에서의 VM Mobility 지원

# IBM SDN Solution

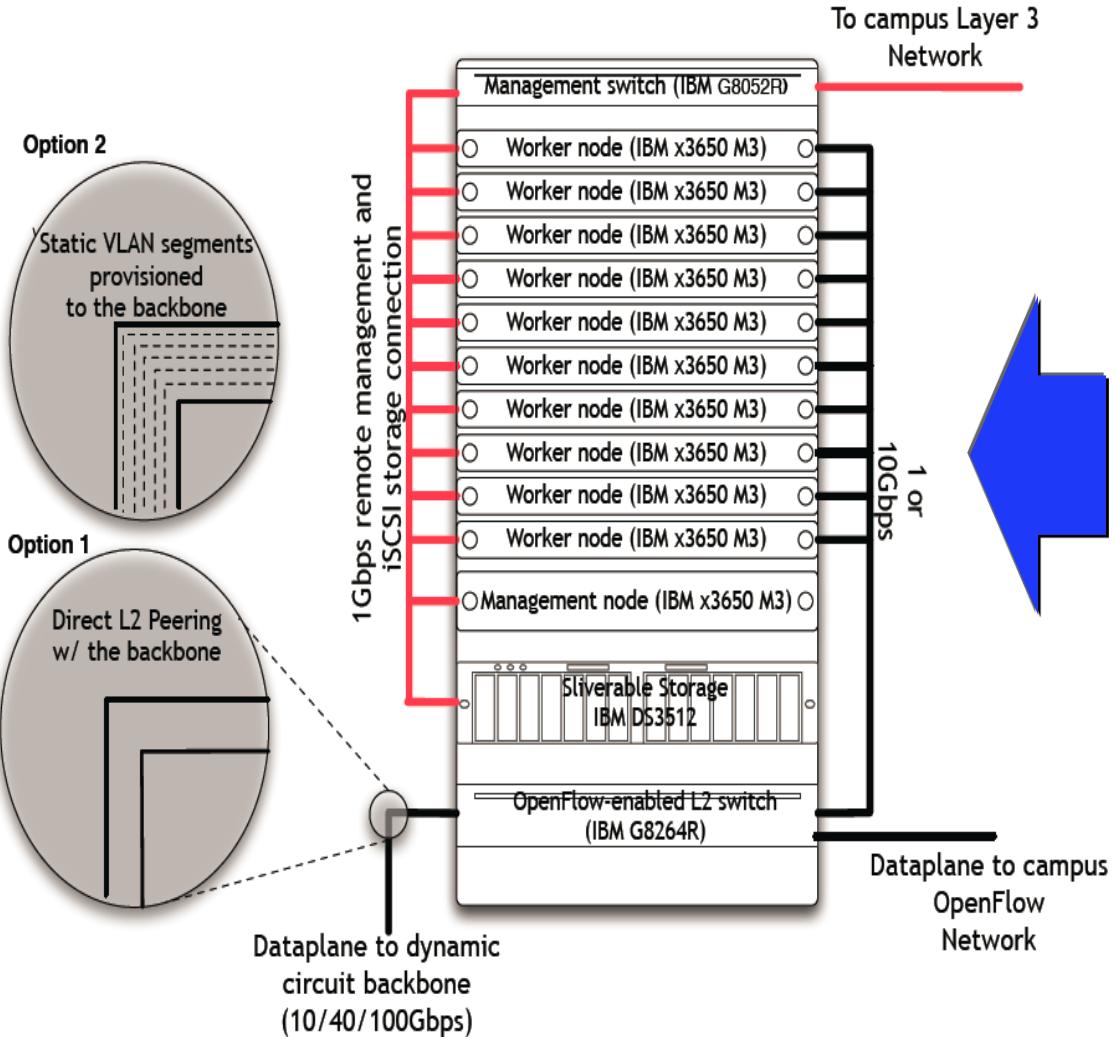

## 3. IBM SDN Solution > SDN VE (Virtual Environment)

- Non UnderLayer와의 통신 가능

# Appendix

## ❖ SDN OpenFlow Reference Information

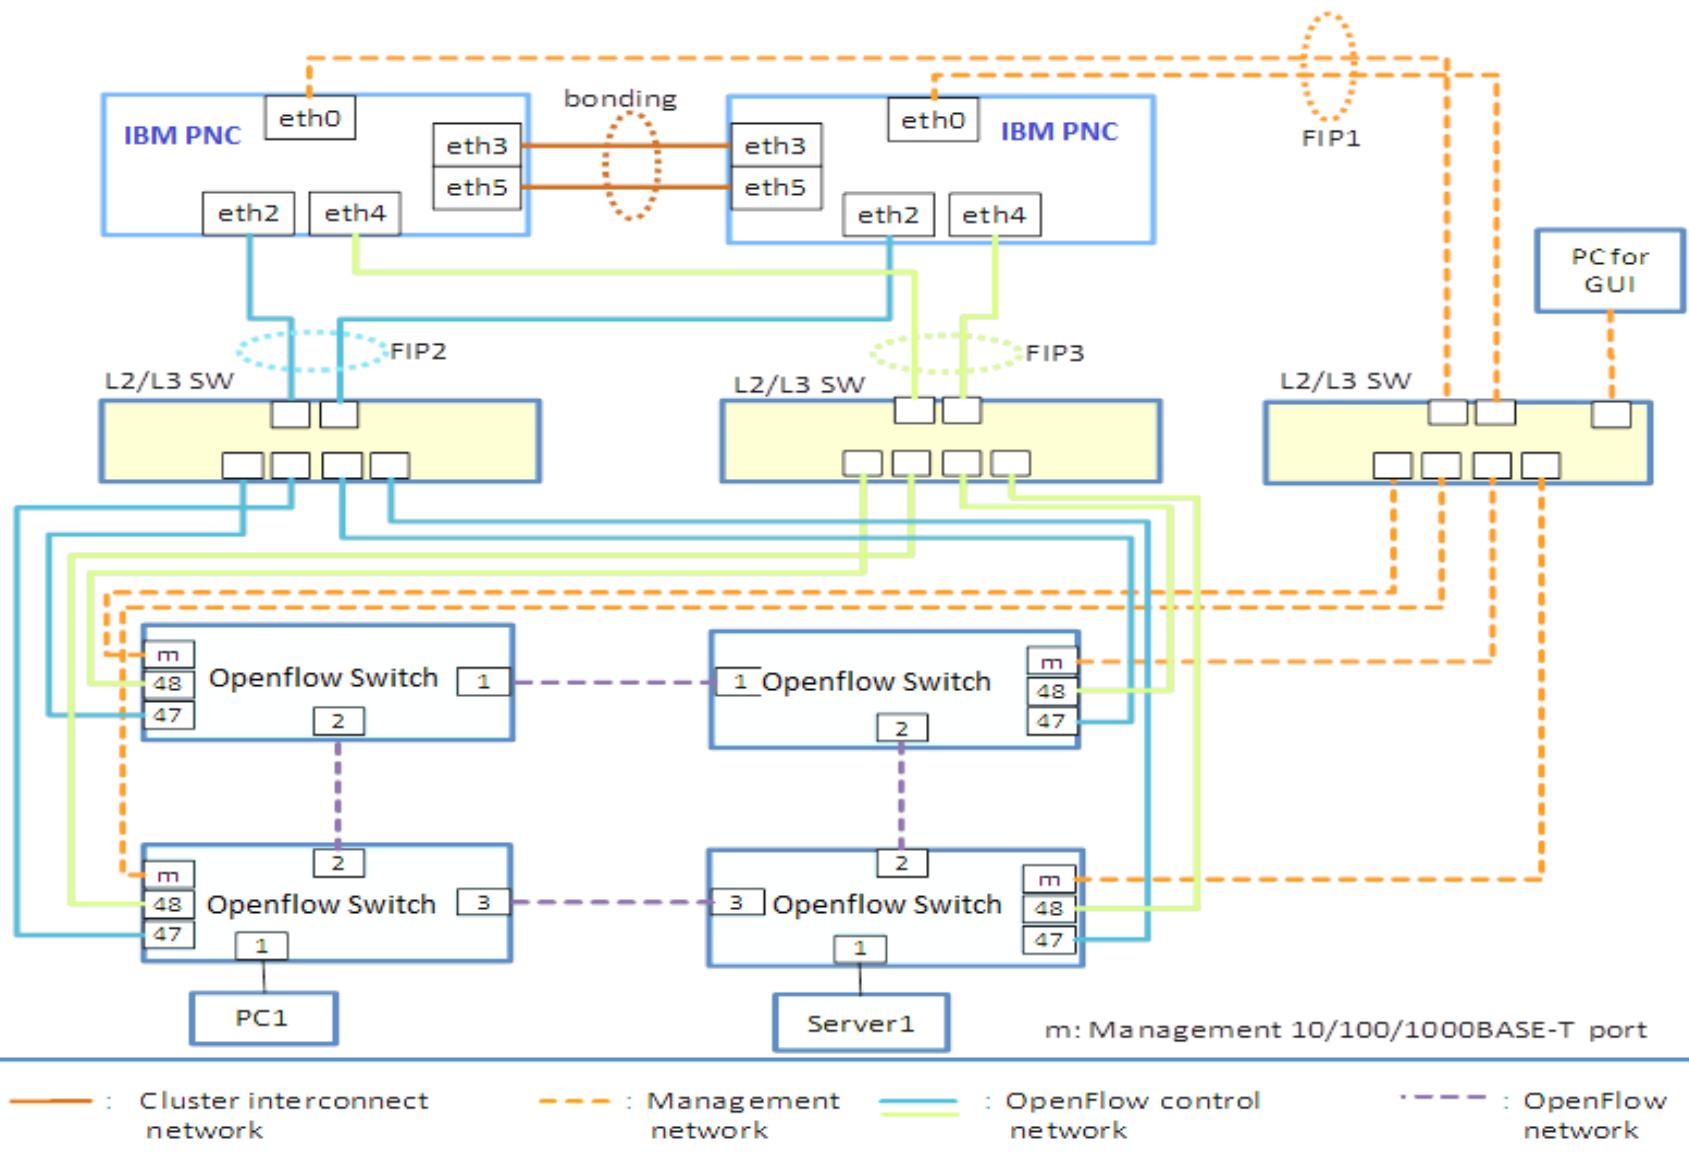

- 100 Virtual Machines
  - ➔ it is based on a standard cloud cluster stack ([Linux/KVM/Eucalyptus](#))
- 6TB local iSCSI Storage
  - ➔ Image storage, measurement data storage and other experimental needs ([IBM DS3512](#))
- 10/40GbE OF Switch
  - ➔ OpenFlow enabled Layer2 dataplane switch with VLAN capabilities connects the nodes to the backbone ([IBM G8264R](#))
- Management switch
  - ➔ [IBM G8052](#)
- Management/Head Node
  - ➔ [IBM 3650M3](#)

# Appendix

## ❖ IBM SDN VE Sample Topology

# Appendix

- ❖ The Best Suited SDN Solution

## PureFlex

Only IBM can pull together all aspects of convergence

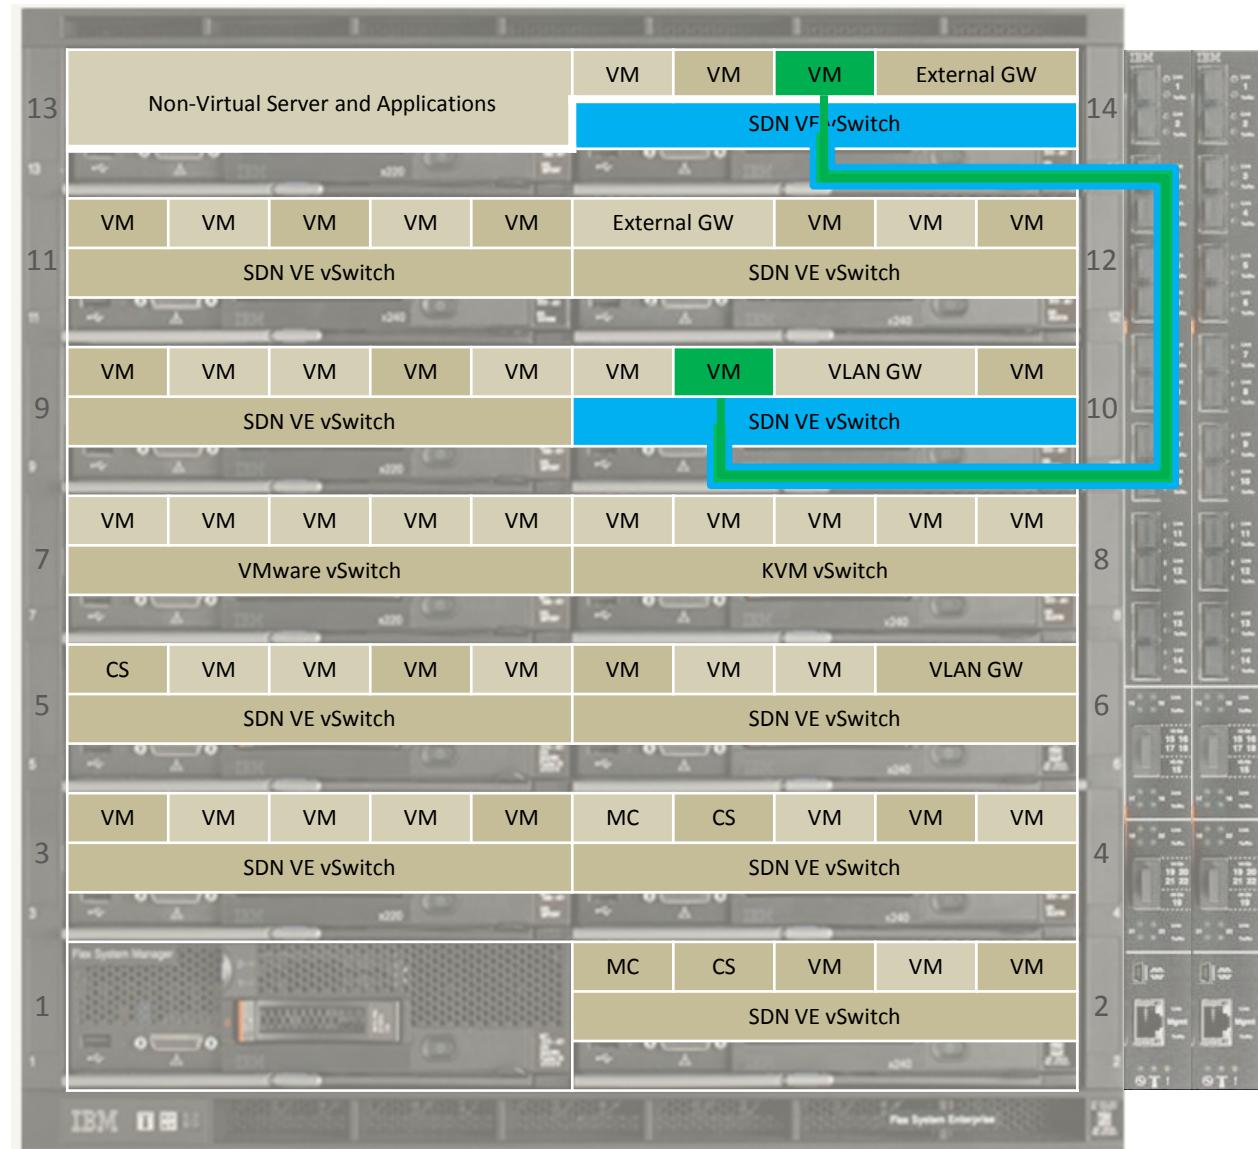

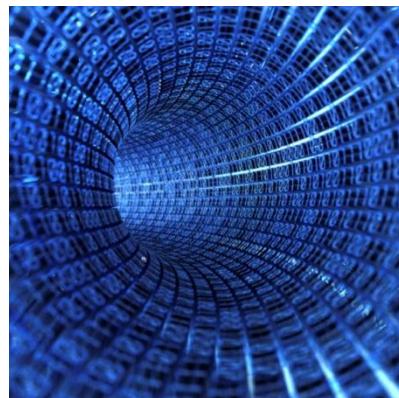

- Single point control for resource virtualization/systems management
- Infrastructure-as-a-Service (IaaS)
  - SmartCloud entry (private cloud)
- End-to-End Life-Cycle Support
- Single point of Contact
- Advanced industry services organization and Certified BP Network
- Higher VM density, more Memory
- Designed to support the growth of future generations
- Integrated, scalable, 3<sup>rd</sup> party storage virtualization
- Real-time Compression, Tiering, Pooling
- Hybrid Networking (SDN or Legacy Networking): across multiple protocols
- Industry standard OpenFlow, 802.1 Qbg
- Uncompromised I/O: 40Gb Ethernet, 16Gb Fibre Channel, and 56Gb Infiniband
- Open Choice for compute, network, storage, OS and Hypervisors
- Desktop Virtualization: VirtualBridges, Citrix, VMware and ISV solutions

# Appendix

## IBM SDN VE Traffic Shown on a Flex Chassis

- With an SDN VE Architecture deployed into a VMware vSphere ecosystem, the VMware vSwitches are replaced with SDN VE vSwitches
- IP packets for SDN VE virtual networks are encapsulated within a standard IP packet for transit across the existing underlay IP network
- IP packet encapsulation is added/removed as traffic passes through an SDN VE vSwitch at each end

# Appendix

## IBM SDN VE Architecture Mapped to Flex System

### Virtual Domain 1

- Virtual Network 1
- Virtual Network 2

### Virtual Domain 2

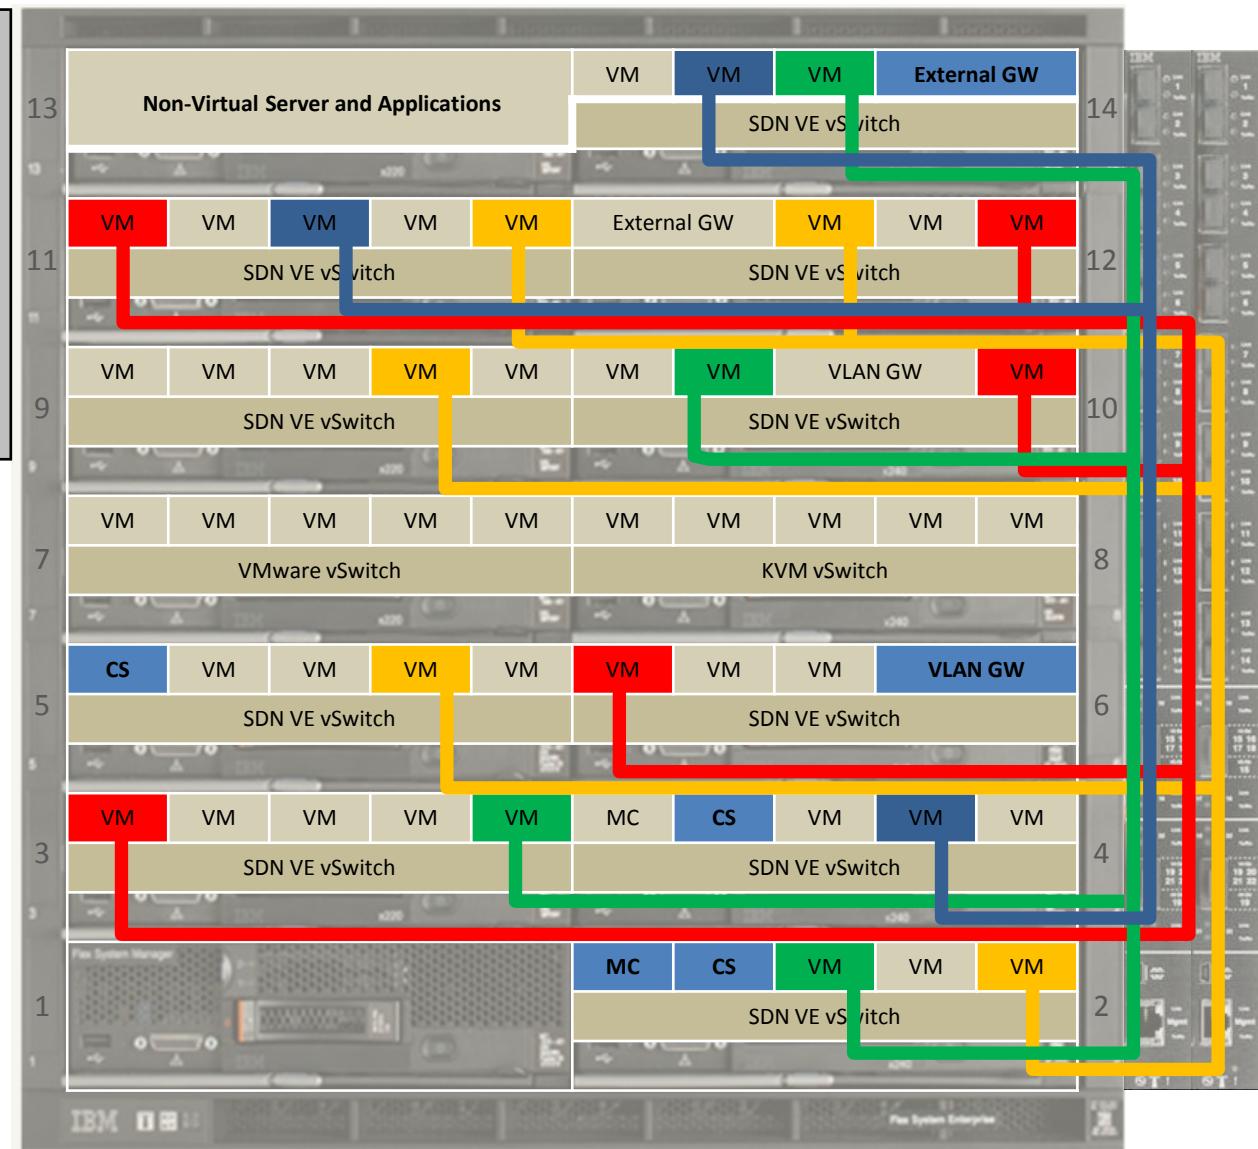

- Virtual Network 3
- Virtual Network 4

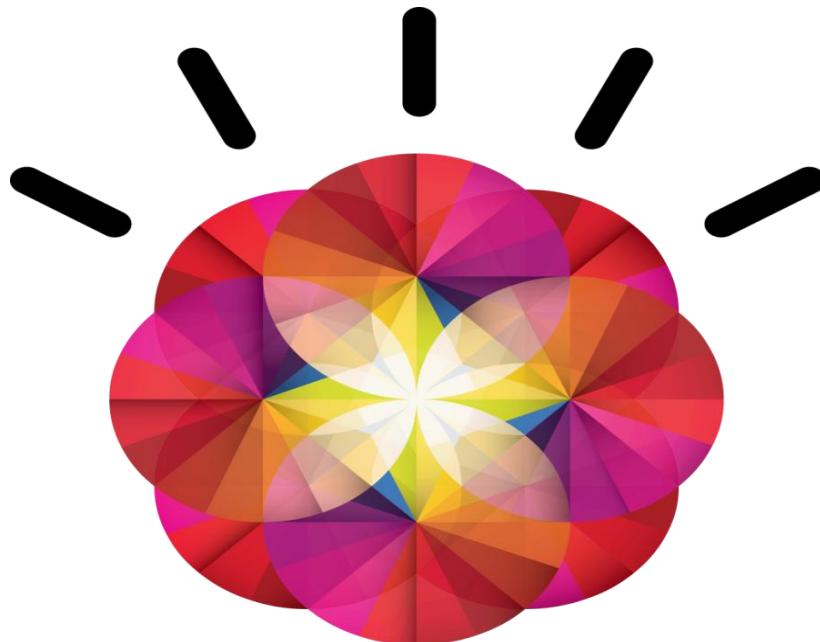

### Virtual Domain Highlights

- Virtual domains are a collection of virtual networks
- In a multi-tenant environment individual tenants are fully secured from each other
- Up to 4000 virtual domains may exist in a single SDN VE environment

### Virtual Network Highlights

- Virtual domains are a collection of virtual network subnets
- Policies define routing permissions between virtual networks.
- Up to 16000 virtual networks may exist in a single SDN VE environment

Thank You
