본 설치 가이드는 공개SW 역량프라자에서 클라우드 컴퓨팅 기반 기술 중 HIVE에 대한 테스트 결과 보고서 외에 테스트 환경에 대한 이해를 돋고자 작성되었습니다.

모든 테스트 환경 구성에 대한 내용은 포함되어 있지 않으며, 주의가 필요하거나 참고해야 할 내용을 기반으로 작성되었습니다.

## 2. Server 설정

- CentOS 설정
  - SELinux 파일 수정

```
vi /etc/selinux/config
```

```
# This file controls the state of SELinux on the system.  
# SELINUX= can take one of these three values:  
#       enforcing - SELinux security policy is enforced.  
#       permissive - SELinux prints warnings instead of enforcing.  
#       disabled - No SELinux policy is loaded.  
#SELINUX=disabled  
# SELINUXTYPE= can take one of these two values:  
#       targeted - Targeted processes are protected,  
#       mls - Multi Level Security protection.  
SELINUXTYPE=targeted
```

```
reboot;
```

- iptables 중단

```
chkconfig iptables off  
chkconfig ip6tables off
```

- hosts 파일 수정

```
vi /etc/hosts
