

Open Source based Smart Ship

Industry 4.0 powered by Open Source

Manufacturing Companies

Siemens

General Electrics

Are They Manufacturing Companies?

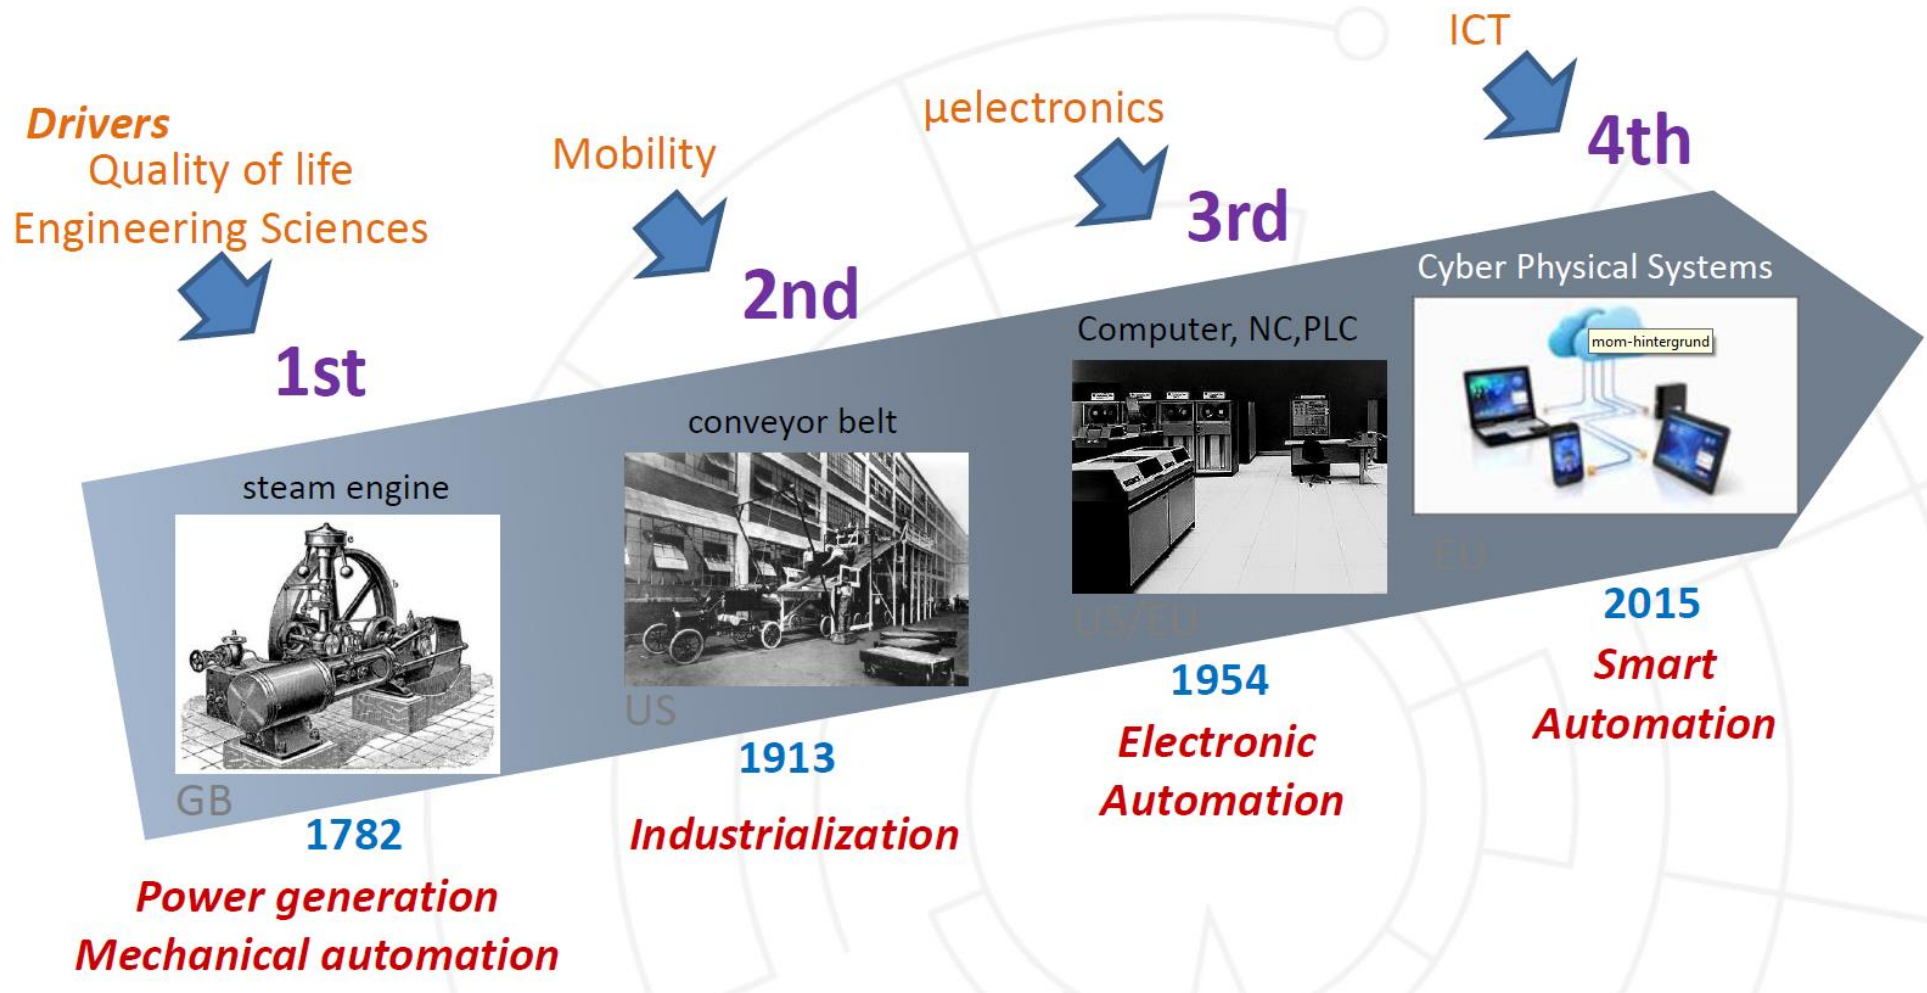

Google Self-Driving Car

Tesla Motors

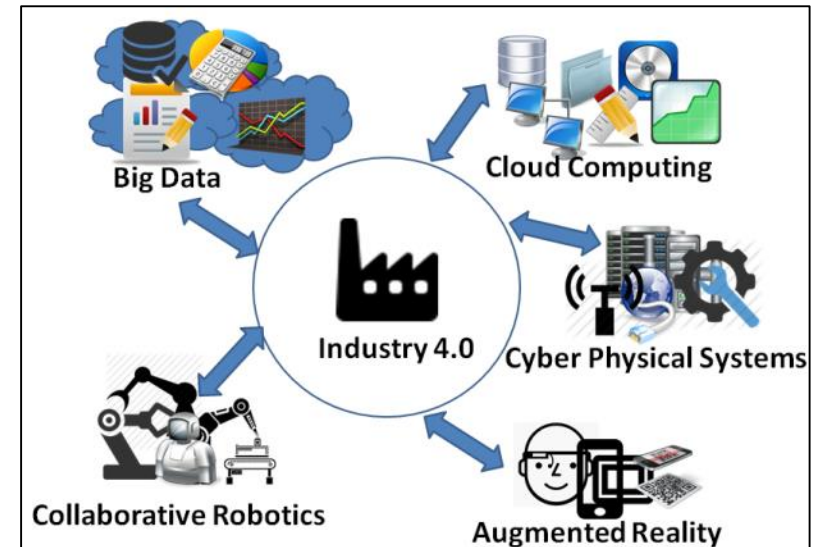

Industry 4.0

The 4th Industrial Revolution - „Industry 4.0“

Industry 4.0 Drivers

- After 2008 financial crisis, relighting of manufacturing industry and re-industrialization
- Increasing retirements in industrially developed countries and
- ICT(ICBM) based 4th industrial revolution
 - Rapid development of IoT/M2M, BigData, Cloud computing, Smart Robot technologies
- Capable of connecting manufacturing eco-system and societies

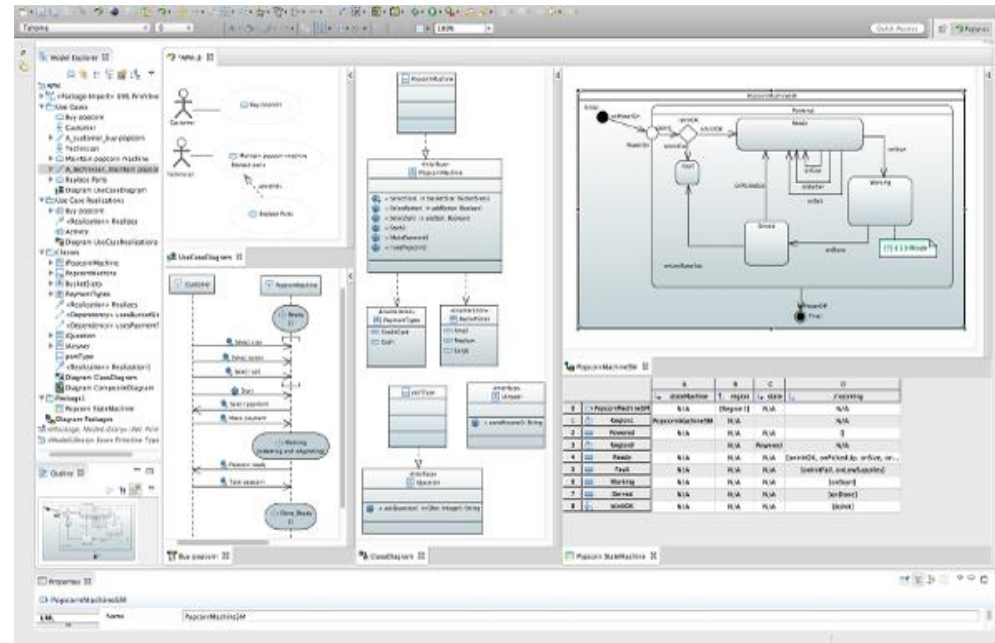

How Open Source help Industry 4.0?

Smart Ship Case Study

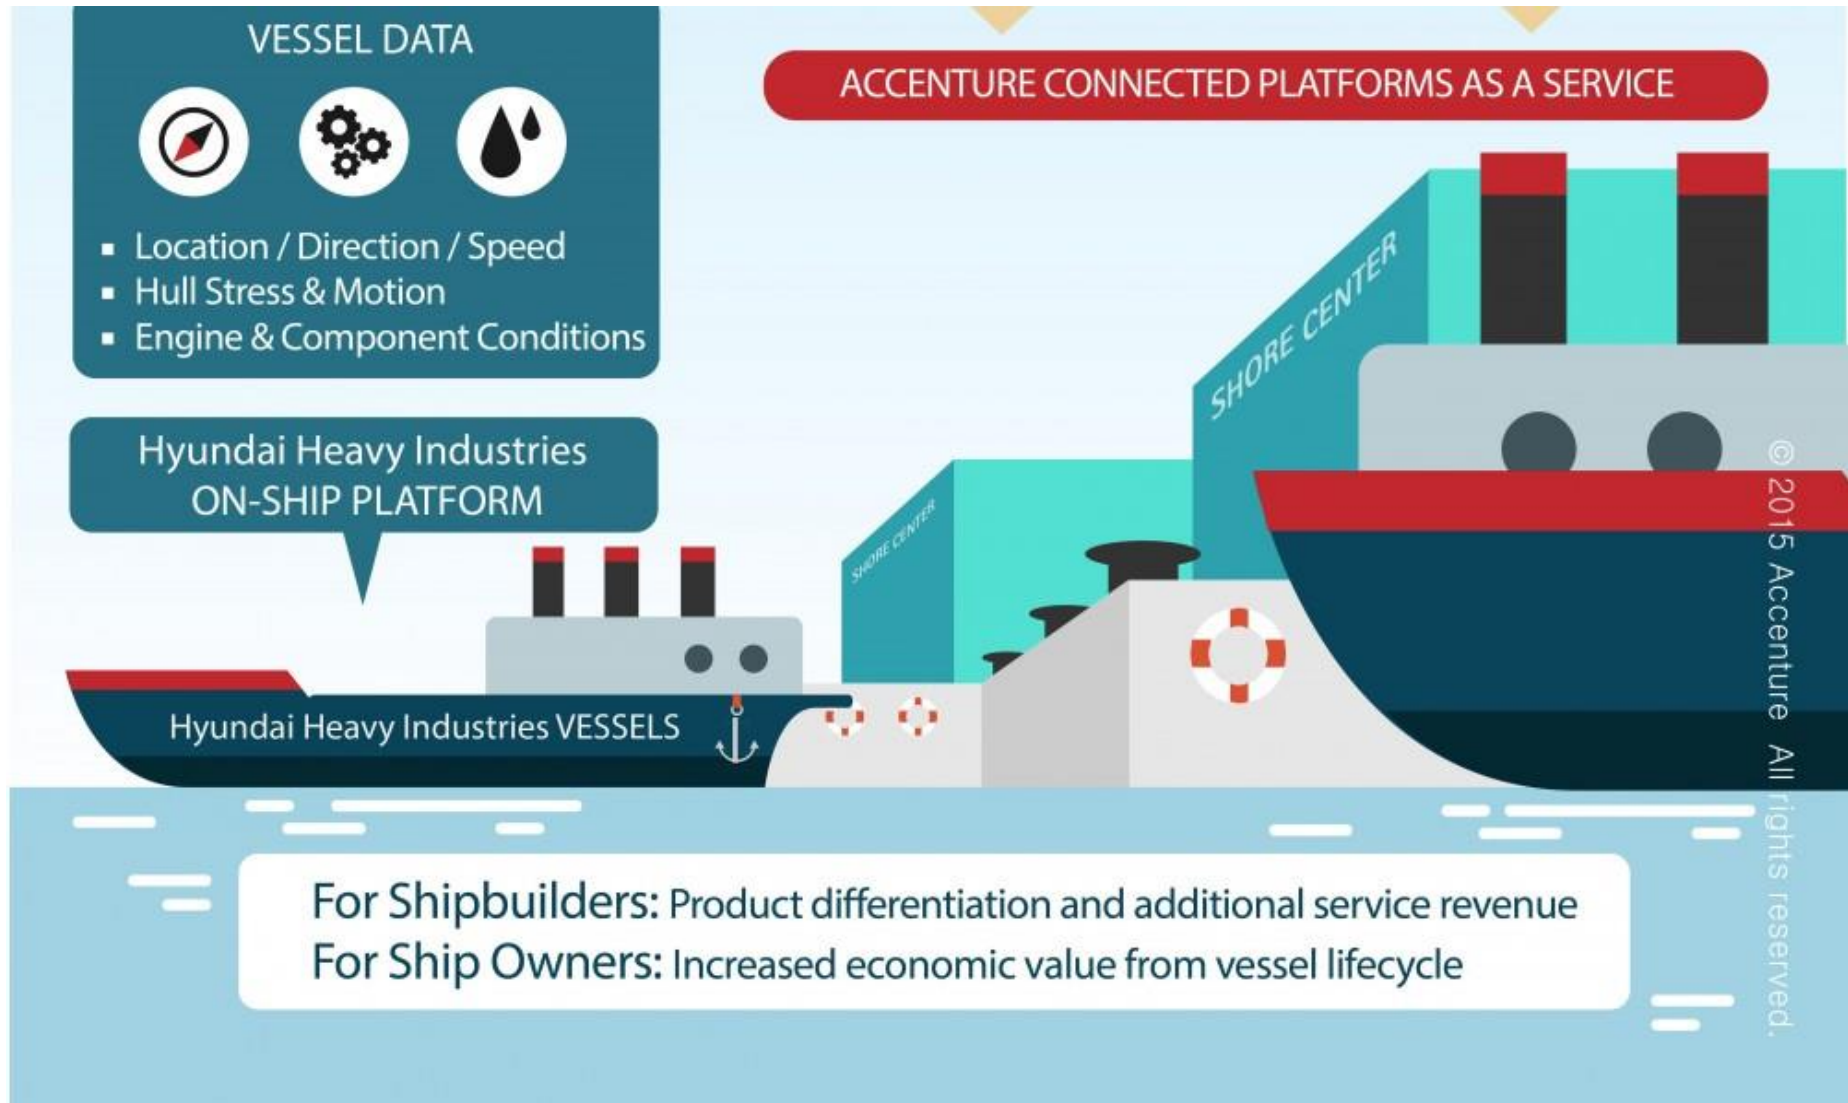

Open Source Case Study in Manufacturing, “Polarsys”

- Many closed software drawbacks in safety related industries
 - Increasing embedded software
 - Long-term(30~70 years) maintenance is crucial → Open Technology is required
- Open Source project for safety related industries lead by Airbus and Eclipse Foundation
- Design and development tools, embedded software for Aerospace, Defense, Transportations, Communications, Energy, Healthcare

Airbus Aircraft Embedded Software

Connected Smart Ship

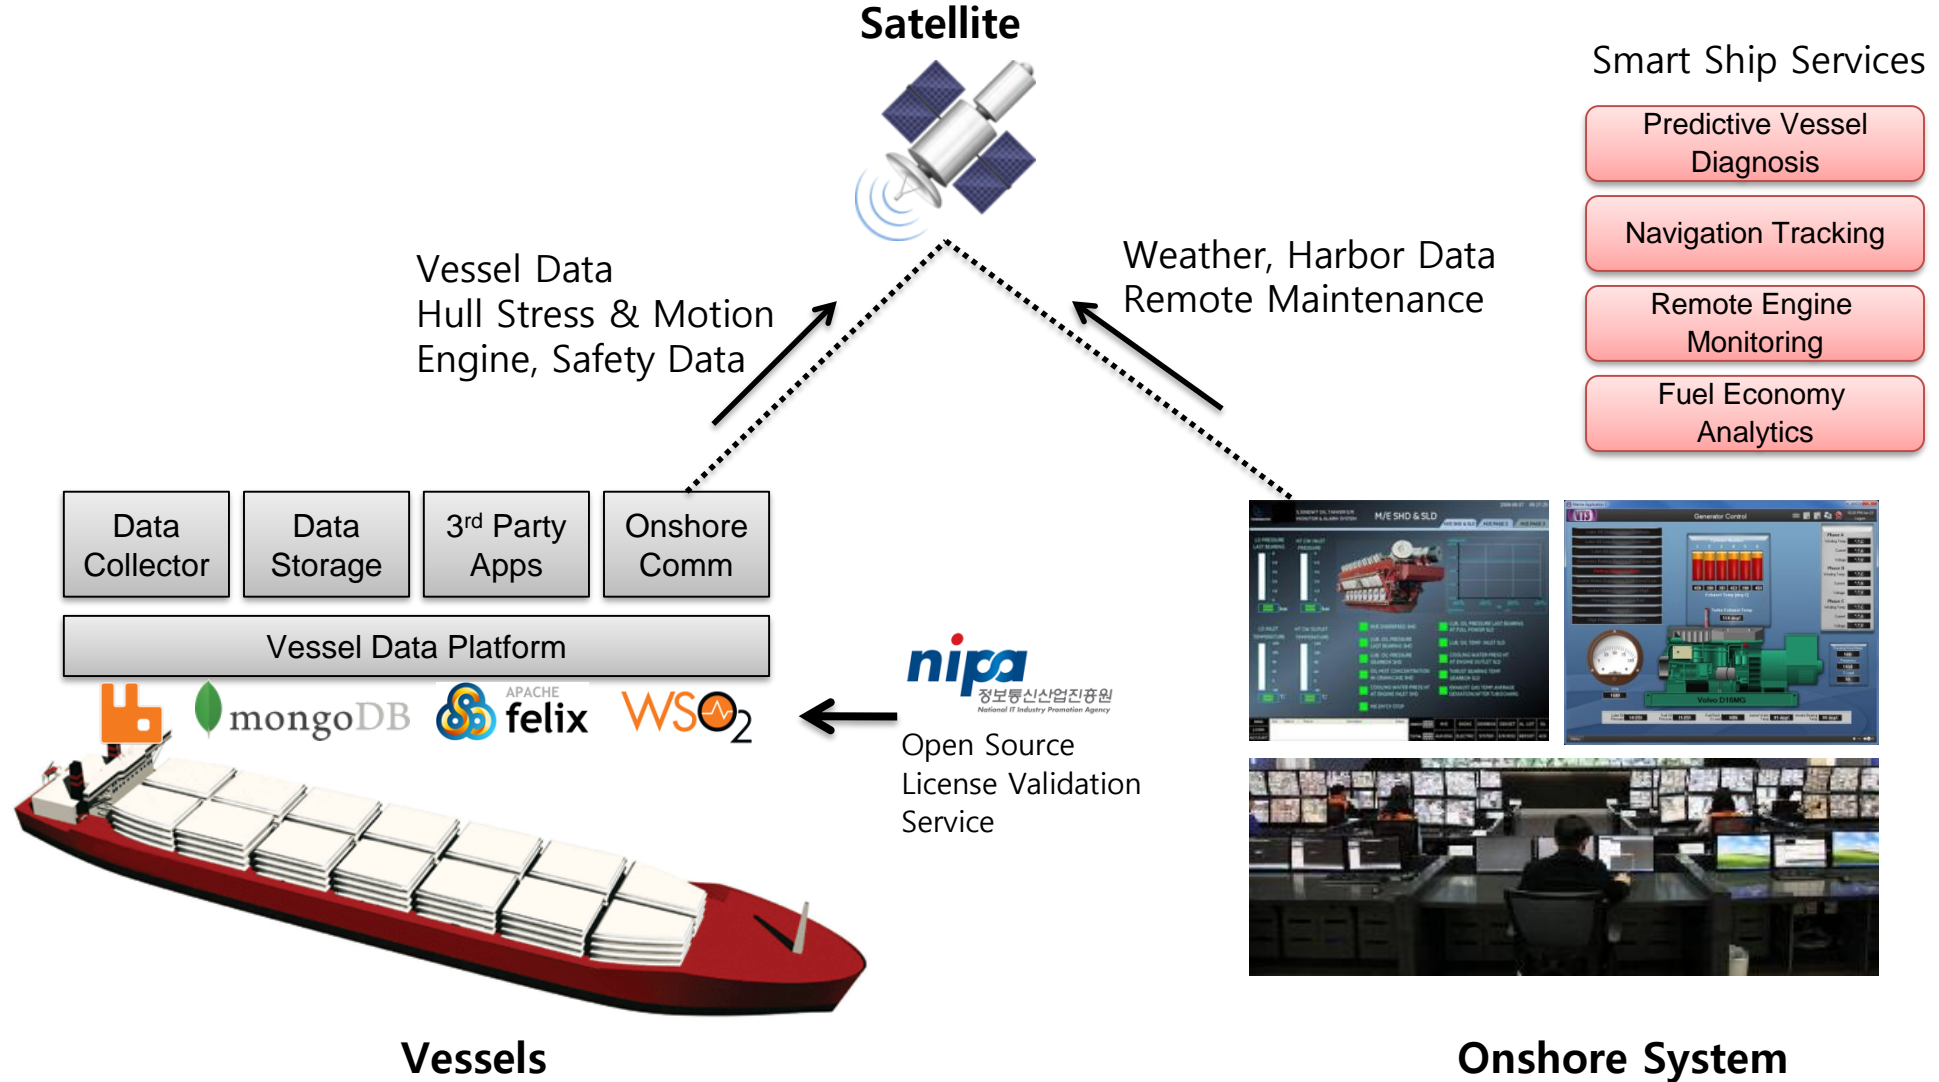

Hyundai Heavy Industry

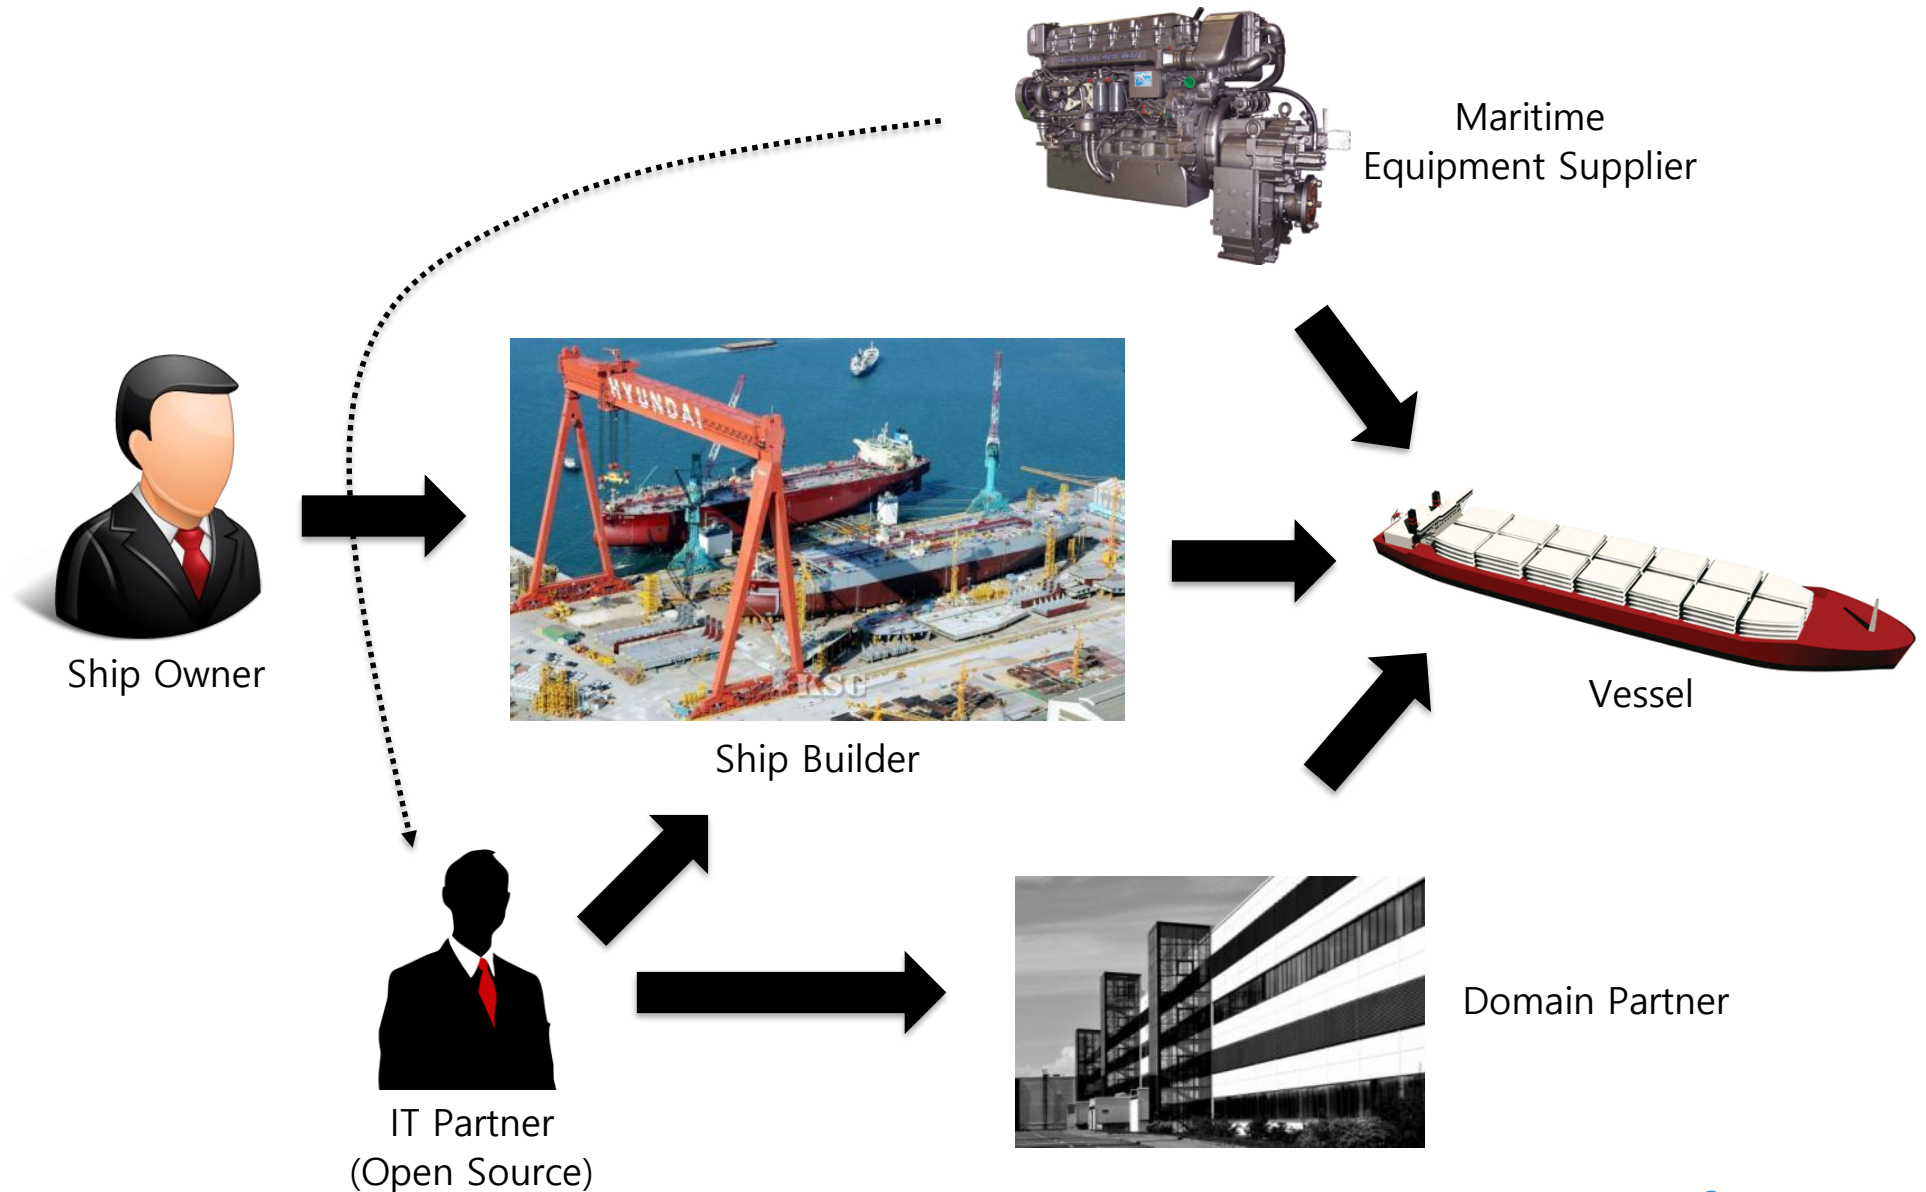

- The world largest Shipbuilding company
 - Containership, Drillship, LNG Carrier
 - FPSO, Semi-submersible (Offshore Engineering)
 - Marine Engine
 - Power Plant, Oil & Gas Production Facility
- Large Open Source House
 - Open Source is widely used in IT
 - Development Framework
 - OpenFOAM
 - Linux
 - Bigdata

Open Source based Smart Ship Platform

Shipbuilding Industry Ecosystem

Summary

What does Open Source help?

Lower Cost, Shorter Project, but More Stable System

Open Source provides Industry 4.0 IT Infrastructures

New Opportunities for S/W Company

Strengthening Competitiveness of Manufacturers
