open source

Actively participate in the open source community and code contribution

Linux、Apache、Eclipse、Postgresql、Mozilla、Android、OpenStack、php、Ruby、Google Code
Data from: markmail.org , 03/25/2015

As a core member to participate and contribute several open source community

OSS Foundation	Member Level	Huawei Contribution	
CLOUD FOUNDRY	Gold Member	Top 3	Paas
hadoop	Sliver Member	Top 4	Big Data
Spark	Sliver Member	Top 4	
THE LINUX FOUNDATION	Platinum Member	Top 20 in Kernel. LTS Maintainer of Kernel Version 3.4.	OS
OpenStack	Gold Member	TOP5 in Liberty version	Cloud
OPEN CONTAINER PROJECT	Founding Member	Top 5 in Docker	
OPEN DAYLIGHT	Sliver Member	Contribute Asia Pacific Laboratory	
Linaro	Core Member	Leader of the foundation Seats in Board & TSC	Hardware
OPEN Compute Project	Sliver Member	In 2011 , Huawei Joined	

HUAWEI

Contribution to OpenStack

Huawei incubator projects and new features (blueprints)

1. Initiated two framework incubator projects oriented to cloud data center and NFV scenarios: Compass (management automation) and OpenStack Cascading.

2. Streamlined over 500+ IT/ICT features for cloud data center and NFV scenarios, submitted 400+ blueprints to the community, among which 100+ ones have been implemented.

3. Worked with Red Hat to promote more than 10 carrier-focused NFV features, including NUMA affinity, VM NIC bandwidth scheduling, and CPU binding, in the community.

Community Contribution Ranking (Liberty Version)

- Blueprints: 59 (ranked 4)

- Resolved Bugs: 290 (ranked 6)

- Code Lines: 154618 (ranked 7)

- Commits: 915 (ranked 6)
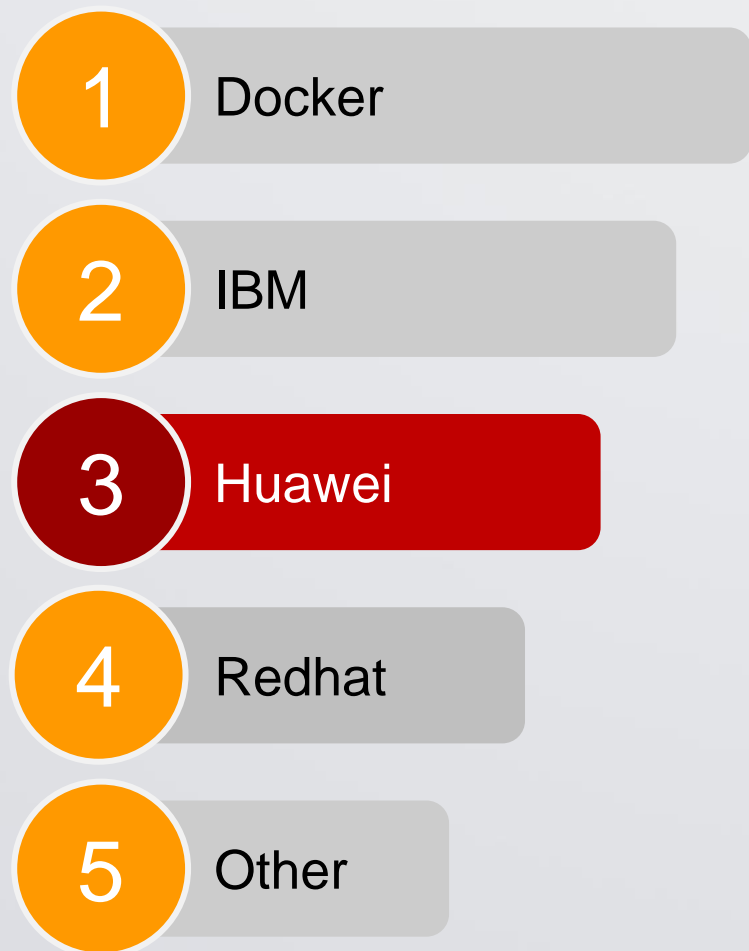

- Reviews: 6363 (ranked 6)

Contribution by companies
#	Company	Completed Blueprints
1	Mirantis	98
2	Red Hat	75
3	HP	72
4	Huawei	59

HUAWEI

Contribution to CloudFoundry

2015-leading contribution in 8 areas

PMC	FOSS Features
Application Deployment	① BOSH to support TOSCA ② Cluster Management ③ Resource Orchestration ④ Prediction Based Automatic Scale Out ⑤ Full Docker Support
Container Network	⑥ Network Enhancement
Security	⑦ Security Enhancement
Service Enablement	⑧ API Management

2015 – participating in 4 areas

Community Features
① HA v2 – IBM
② APP Placement and HA Resource Pool - Pivotal
③ Router Service - Pivotal
④ CF Monitoring – Pivotal
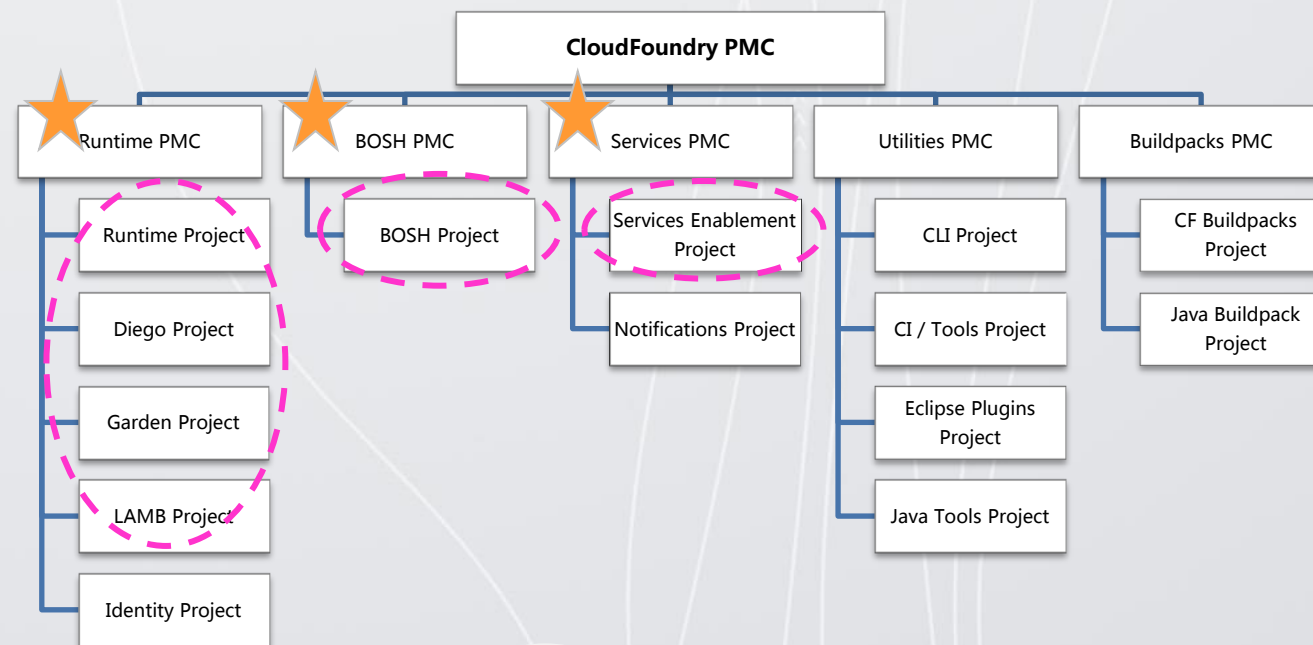

Top 3 Huawei

HUAWEI

THANK YOU

HUAWEI

Lead OpenStack to commercial enhancement

Engineering

- Up-stream code functional test, bug fix and patch release
- Integration, verification and certification on plug-ins, drivers and backends (hypervisor, storage, network devices, etc.)
- OpenStack and other software packaging and distribution
- Automatic deployment and upgrade tools

Domain-oriented Enhancement

- NFV-oriented enhancement: Carrier-grade HA, Carrier-grade high throughput and low latency, workload-oriented VM scheduling capability,
- Public cloud oriented enhancement: Automatic operational services, IaaS+ services enabling

Engineering	Pure Up-stream OpenStack	Scenario-oriented Enhancement
Performance		Availability & Reliability

Performance Improvement

- Performance tests and tuning, covering both OpenStack and 3rd party components, e.g. DB, message queue
- Large scale deployment design
- Single OpenStack deployment to support 1000 physical hosts
- OpenStack cascading to support 100,000 physical hosts and 1 million VMs

Availability and Reliability

- HA deployment of controller nodes, load-balancing enabled
- Management data backup, centralized log management
- Automatic failure recovery of system components

HUAWEI
